when he begins to take up seriously the study of its structure Moreover an elementary knowledge of the use of the microscope is absolutely essential to any adequate study of Zoology as an intellectual discipline and this difficulty such as it is may as well be met first as last Owing to the lamented death of Professor T Jeffrey Parker at a time when but little progress had been made with this work his actual share in it has been but slight but as it was planned between us and the earlier parts had the advantage of his revision and more especially as it owes a great deal to his work in the Text Book it has been thought right to let it appear under our joint names as originally intended I have to express very great indebtedness to Professor W Newton Parker for the pains he has taken in revising the proof sheets and for many valuable suggestions which he has made during the progress of the work William A Haskell Manual of Coniferae ,1900 *Handbook of Anthropometry* Victor R. Preedy,2012-02-02 Anthropometry is the physical measurement of linear growth and body composition In this handbook all facets and features of anthropometry are described Each chapter includes applications to other areas of health and disease

A Manual of Zoology Richard Hertwig, 1912 Excerpt from A Manual of Zoology The favor with which the first and second American editions of Hertwig's Zoology have been received has led to a thorough revision of the whole with a close comparison with the latest German edition In this there have been introduced many new features bringing the work up to date These include a discussion of Mendelian inheritance many modifications in the account of the theory of evolution and a considerable enlargement of the Protozoa and especially of the pathogenic forms making the volume of more value to the student of medicine To have included these without changes elsewhere would have resulted in a much larger volume But the demand in American colleges has been for a smaller work and so a reduction has been made in two ways There has been a condensation by the elimination of unnecessary words and phrases and by the omission of considerable matter of minor importance Then there has been the recognition of the fact that the book has two uses one in the class room the other as a reference work The two classes of matter have been distinguished by difference of type No attempt has been made to bring the systematic names into accord with the latest vagaries of the systematists No useful and could be served by changing or transferring the well known names of Echidna Coluber Amia Homarus Unio Holothuria Amba etc while the confusion this would introduce would be enormous It should be understood that while the revision is based upon the German edition of Professor Hertwig he should not be held responsible for any changes introduced The whole responsibility for these rests upon the American reviser
