Tamke,Christoph Gengnagel,Billie Faircloth,Fabian Scheurer,2015-11-12 This book reflects and expands on the current trend in the building industry to understand simulate and ultimately design buildings by taking into consideration the interlinked elements and forces that act on them This approach overcomes the traditional exclusive focus on building tasks while posing new challenges in all areas of the industry from material and structural to the urban scale Contributions from invited experts papers and case studies provide the reader with a comprehensive overview of the field as well as perspectives from related disciplines such as computer science The chapter authors were invited speakers at the 5th Symposium Modelling Behaviour which took place at the CITA in Copenhagen in September 2015      *Advanced Biomedical and Clinical Diagnostic Systems*

,2006      *ARM-based Microcontroller Projects Using mbed* Dogan Ibrahim,2019-04-15 ARM based Microcontroller Projects Using mbed gives readers a good understanding of the basic architecture and programming of ARM based microcontrollers using ARM s mbed software The book presents the technology through a project based approach with clearly structured sections that enable readers to use or modify them for their application Sections include Project title Description of the project Aim of the project Block diagram of the project Circuit diagram of the project Construction of the project Program listing and a Suggestions for expansion This book will be a valuable resource for professional engineers students and researchers in computer engineering computer science automatic control engineering and mechatronics Includes a wide variety of projects such as digital analog inputs and outputs GPIO ADC DAC serial communications UART 12C SPI WIFI Bluetooth DC and servo motors Based on the popular Nucleo L476RG development board but can be easily modified to any ARM compatible processor Shows how to develop robotic applications for a mobile robot Contains complete mbed program listings for all the projects in the book      *NASA Tech Briefs* ,2016-06      *Guidance, Control and Docking for CubeSat-based Active Debris Removal* Mohamed Khalil Ben-Larbi,2023-08-07 While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations there are no effective solutions existing for the mass removal of satellites Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee IADC mitigation guidelines the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures NASA scientist Donald J Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects could cause a cascade that renders space unusable for many generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution

to the active debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware
