Progress in Temperate Fruit Breeding H. Schmidt, M. Kellerhals, 2012-12-06 This book contains the papers and posters presented at the Eucarpia Fruit Breeding Section Meeting held at Wädenswil Einsiedeln Switzerland from August 30 to September 3 1993 It gives an overview of the latest trends in temperate fruit breeding in Europe and overseas Three subjects were considered in special workshops durability of scab resistance in apple biotechnology and molecular markers One important aim of modern fruit breeding is stable resistance to pests and diseases Molecular markers might help to identify the genetic basis of important characters related to disease and pest resistance and components of yield and quality Gene transfer has been successfully applied in several fruit species However public opinion in many countries does not favour this new technology and its products Despite these new approaches traditional breeding methods still predominate many aspects of traditional breeding are considered in this book

Genetic resources and their exploitation are dealt with in a special chapter Aspects of breeding minor crops such as walnut almond hippophae cornel etc are also considered Progress in Temperate Fruit Breeding is meant for fruit breeders pomologists lecturers students and growers
