Grating-Based X-Ray Phase-Contrast Mammography Kai Hermann Scherer, 2016-06-06 This thesis offers an accessible guide to biomedical phase contrast imaging with over 20 radiographic illustrations It focuses on research to improve radiography and particularly mammography applications by using a novel X ray imaging modality that exploits the wave nature of X rays rather than just their absorption in tissue Further it explores a broad range of potential applications from the assessment of breast cancer and the evaluation of microcalcification clusters to the examination of renal stones X ray imaging is an indispensable tool in modern medical diagnostics and ranges from simple radiography applications to advanced CT imaging protocols This novel phase contrast approach has the potential to deliver significantly improved diagnostic information also and especially in cases where mammography is used for screening purposes The thesis is based on several studies conducted by the author working in close interdisciplinary cooperation with medical doctors at two university clinics in Munich and successfully demonstrates this diagnostic potential in pre clinical experiments Breast Imaging Andrew D.A. Advances in Artificial Intelligence and Machine Learning Applications for the Imaging of Bone and Soft Tissue Tumors Brandon K. K. Fields, George R. Matcuk Jr., Bino A. Varghese, 2025-01-03 Increasing interest in the development and validation of quantitative imaging biomarkers for oncologic imaging has in recent years inspired a surge in the field of artificial intelligence and machine learning Initial results showed promise in identifying potential markers of treatment response malignant potential and prognostic predictors among others however while many of these early algorithms showed the optimistic ability to separate pathologic states on in house datasets it was often the case that these classifiers generalized poorly on external validation sets and thus were of limited utility in the clinical setting This issue was additionally compounded by the frequent use of data filtering and feature selection techniques in many studies to further bolster the machine learning results in limited case scenarios thereby biasing the overall fit and further reducing generalizability
