- \_\_\_ 1. What is the main source of energy for the entire planet?  
a) crops                      b) magnetic fields                      c) sunlight                      d) the ocean
- \_\_\_ 2. The first trophic level of an ecosystem consists of  
a) plants                      b) herbivores                      c) carnivores                      d) detritivores
- \_\_\_ 3. Within an ecosystem, there will be more \_\_\_\_ than \_\_\_\_  
a) carnivores, herbivores                      b) herbivores, carnivores                      c) animals, plants
- \_\_\_ 4. Complete this statement: **All** primary producers  
a) harness the energy of sunlight through the process of photosynthesis  
b) take in food and break it down to release energy  
c) are small microorganisms, such as bacteria  
d) take in energy to assemble compounds needed for growth
- \_\_\_ 5. Which of the following **BEST** describes the flow of energy through a food chain?  
a) Energy flows between primary producers and consumers, in either direction.  
b) Energy flows from consumers to primary producers, in one direction only.  
c) Energy flows from primary producers to consumers, in one direction only.  
d) Energy flows between primary producers and consumers, in an endless cycle.
- \_\_\_ 6. A marine biologist is studying food webs in the open ocean. Which step would be used to identify the primary producers?  
a) look for small invertebrates in the top layer of the water  
b) look for fish swimming between the surface and bottom  
c) look for animals that burrow in the sand at the bottom  
d) look for tiny phytoplankton that floats near the surface

Examine the food web to indicate which statements are TRUE (T) and which are FALSE (F)

- \_\_\_ 7. The butterfly is a primary consumer
- \_\_\_ 8. The frog is a primary consumer
- \_\_\_ 9. The small songbird is an omnivore
- \_\_\_ 10. Arrows show the flow of energy
- \_\_\_ 11. The frog is a carnivore
- \_\_\_ 12. There is only one tertiary consumer in this ecosystem
- \_\_\_ 13. The eagle occupies the same trophic level as the fox.

Emmett Duffy,Martin Thiel,2007-09-06 Understanding of animal social and sexual evolution has seen a renaissance in recent years with discoveries of frequent infidelity in apparently monogamous species the importance of sperm competition active female mate choice and eusocial behavior in animals outside the traditional social insect groups Each of these findings has raised new questions and suggested new answers about the evolution of behavioral interactions among animals This volume synthesizes recent

research on the sexual and social biology of the Crustacea one of the dominant invertebrate groups on earth Its staggering diversity includes ecologically important inhabitants of nearly every environment from deep sea trenches through headwater streams to desert soils The wide range of crustacean phenotypes and environments is accompanied by a comparable diversity of behavioral and social systems including the elaborate courtship and wildly exaggerated morphologies of fiddler crabs the mysterious queuing behavior of migrating spiny lobsters and even eusociality in coral reef shrimps This diversity makes crustaceans particularly valuable for exploring the comparative evolution of sexual and social systems Despite exciting recent advances however general recognition of the value of Crustacea as models has lagged behind that of the better studied insects and vertebrates This book synthesizes the state of the field in crustacean behavior and sociobiology and places it in a conceptually based comparative framework that will be valuable to active researchers and students in animal behavior ecology and evolutionary biology It brings together a group of internationally recognized and rising experts in fields related to crustacean behavioral ecology ranging from physiology and functional morphology through mating and social behavior to ecology and phylogeny Each chapter makes connections to other non crustacean taxa and the volume closes with a summary section that synthesizes the contributions discusses anthropogenic impacts highlights unanswered questions and provides a vision for profitable future research

Wiersma, 2022-04-07 This book offers the first guide to landscape ecologists on the art and science of doing experiments both observational and manipulative How do you conduct an experiment when your study subject is as big as a landscape Issues of scale spatial heterogeneity and limitations

on replication may challenge scientists seeking to carry out robust experiments in landscape ecology. Beginning with an overview of the history and philosophy of the scientific method and tracing the development of experimental approaches in ecology broadly, the first half of the book discusses the broader issues of what makes a good experiment. Individual chapters describe unique aspects of landscape ecology that present challenges to experimentation with suggestions for solutions on issues of scale and how to apply controls, randomization, and adequate replication in a landscape setting. The second half of the book describes different kinds of landscape ecology experimental approaches including large scale manipulations, experimental model landscapes, mesocosms, and microcosms, *in silico* experiments, novel landscapes. Each chapter describes the advantages and disadvantages of each approach and identifies the types of landscape ecology concepts and questions that a research can address. Examples from around the world in a myriad of different environments help to illustrate the ideas in each chapter. Together with an annotated resources section, this book aims to stimulate ideas and inspire creativity for graduate students and early career researchers who want to conduct better experiments in landscape ecology.
