

## Why is Web Security So Important?

The number of security threats introduced by web traffic has reached epidemic proportions. Traditional gateway defenses are proving to be inadequate against a variety of web-based malware, leaving corporate networks exposed to the inherent danger posed by these threats. The speed, variety and maliciousness of web-based malware attacks highlight the importance of a robust, secure platform to protect the enterprise network perimeter from such threats.

Additionally, mobile users want to easily access their corporate resources regardless of when, where and what device they use. With the lines blurring between personal and professional usage of mobile devices, seamless access and consistent security are critical to protect the end user and the company in this growing borderless network environment.

Lastly, the web has become the ubiquitous platform for application delivery in the enterprise, whether that is browser-based application platforms like Salesforce.com and Google Apps, or rich media applications like Apple iTunes or Cisco WebEx™ using web protocols as a widely available transport in and out of enterprise networks.
