Environmental Geology James S. Reichard, 2024 Environmental Geology 5e focuses on the fascinating interaction between humans and the geologic processes that shape Earth's environment Because this text emphasizes how human survival is highly dependent on the natural environment students should find the topics to be quite relevant to their own lives and therefore more interesting One of the key themes of this textbook is that humans are an integral part of a complex and interactive system scientists call the Earth system Throughout the text the author explains how the Earth system responds to human activity and how our actions affect the very environment in which we live A key point is that our activity often produces unintended and undesirable consequences A good example from the text is how engineers have built dams and artificial levees to control flooding on the Mississippi River But this has caused unintended changes in the geologic environment For thousands of years the rate at which the river deposited sediment in the Mississippi Delta was approximately equal to the rate that the sediment compacted under its own weight Because the two rates were similar the land surface remained above sea level However by using dams and artificial levees to confine the Mississippi River to its channel humans disrupted the delicate balance between sediment deposition and compaction

Arid Lands Water Evaluation and Management Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and

often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions
