Hopkins, Sohair Mehanna, Salah el- Hagggar, 2001 Environmental pollution is a concern of many people in Egypt and the world in general People and Pollution is a study of how

Egyptians in particular understand environmental problems and what their roles are in the solutions This original study is based on extensive field research with both academic and policy relevance The uniqueness of the book comes from its focus instead of the usual approach of analyzing policy and measurements this text seeks to understand how the people themselves often the objects of policy understand their environment and their own actions An interesting finding from the research lies in the focus of Egyptian concerns Rather than the global perspective the depletion of the ozone layer protection of coral reefs and rainforests and so on that is common in the West Egyptians are mainly concerned with matters of immediate environmental degradation such as garbage sewage dirty streets and noise pollution In addition the researchers have found that people are often able to effect changes themselves through cooperation with neighbors thus bypassing the official channels of redress such as NGOs and local government officials The difference in focus of concern and courses of action may be extrapolated to many Third World or developing nations and leads to provocative questions regarding policymaking for public participation in future environmental campaigns Descriptive views from the authors eloquent and moving testimony from members of the community and clear statistical analysis of the findings make this book a highly readable text *People and Pollution* is a pioneering and important work that should be consulted by environmentally concerned readers students and policymakers alike
