Environmentally Friendly Alkylphosphonate Herbicides:

Environmentally Friendly Alkylphosphonate Herbicides Hong-Wu He, Hao Peng, Xiao-Song Tan, 2014-11-04 This book presents essential research on a class of environmentally friendly alkylphosphonate herbicides. This class of herbicides acted as a competitive inhibitor of the pyruvate dehydrogenase complex PDHc to control weeds. The bioreasoning and systematic approach from basic research to field tests of candidate compounds are introduced. The basic research covers the molecular design, chemical synthesis, biological activities, evaluation, structure-activity relationship analysis, and structural optimization. Subsequently, the book reviews the biochemistry of PDHc inhibitors, the selectivity between mammals and plants, and the mechanism of herbicidal activity of novel alkylphosphonates as selective PDHc inhibitors. Field trials for selected alkylphosphonate candidates as herbicides are also included. This book provides a sound basis for the rational design and development of novel herbicides as effective PDHc inhibitors with good enzyme-selective inhibition of plant PDHc between mammals and plants. These studies take full advantages of the low toxicity and low residual impact of selective PDHc inhibitors to design an effective and environmentally friendly herbicide. This book is based on twenty years of research on alkylphosphonates and phosphorus-containing PDHc inhibitors and demonstrates how to develop these PDHc inhibitors as an effective and green herbicide candidate. Hong Wu He PhD is a Professor at the Key Laboratory of Pesticide Chemical Biology, Ministry of Education of China, and Director of the Institute of Pesticide Chemistry, College of Chemistry, Central China Normal University, China. Hao Peng PhD and Xiao Song Tan are both Associate Professors at the Key Laboratory of Pesticide Chemical Biology, Ministry of Education of China, College of Chemistry, Central China Normal University, China. **XV**

International Scientific Conference "INTERAGROMASH 2022" Alexey Beskopylny, Mark Shamtsyan, Viktor Artiukh, 2023-02-24 The book contains proceedings of the XV International Scientific Conference INTERAGROMASH 2022, Rostov on Don, Russia. This conference is dedicated to the innovations in the field of precision agriculture, robotics, and machines, as well as agriculture biotechnologies and soil management. It is a collection of original and fundamental research in such areas as follows: unmanned aerial systems, satellite-based applications, proximal and remote sensing of soil and crop, positioning systems, geostatistics, mapping, and spatial data analysis, robotics, and automation. Potential and prospects for the use of hydrogen in agriculture, for example, in high-performance tractors with hybrid electric transmission, are disclosed in the research works of scientists from all over the world. It also includes such topics as precision horticulture, precision crop protection, differential harvest, precision livestock farming, controlling environment in animal husbandry, and other topics. One of the important issues raised in the book is to ensure the autonomy of local farms. The topic of the impact of the agro-industrial sector on the environment also received wide coverage. Ways to reduce the burden on the environment are proposed, and the use of alternative fuels and fertilizers is suggested. The research results presented in this book cover the experience and the latest studies on the sustainable functioning of agribusiness in several climatic zones. The tundra and

taiga forest steppe the steppe and semi desert all this is a unique and incredibly demanded bank of information the main value of which is the real experience of the functioning of agribusiness in difficult climatic and geographic conditions These materials are of interest for professionals and practitioners for researchers scholars and producers They are used in the educational process at specific agricultural universities or during vocational training at enterprises and also become an indispensable helper to farm managers in making the best agronomic decisions Recent Highlights in the Discovery and Optimization of Crop Protection Products Peter Maienfisch, Ir. Sven Mangelinckx, 2021-03-24 Recent Highlights in the Discovery and Optimization of Crop Protection Products highlights the most prominent recent results in the search for safe and effective new crop protection products With a focus on the design synthesis optimization and or structure activity relationships of new chemistries targeting insect disease weed nematode vector and animal parasite control the book also includes recent developments in crop enhancement chemistries and new approaches to crop protection products The inclusion of information on testing tools green chemistry approaches and the latest discovery tools like modeling structure based design and testing tools makes this volume complete Based on key presentations given at the 14th International IUPAC conference on Crop Protection May 19 24 2019 in Ghent Belgium this book includes the many exciting new discoveries and findings reported It is designed to inspire additional research and advancement in the field Based on science presented at the 2019 International Union of Pure and Applied Chemistry Conference on Crop Protection Provides real world perspectives on pesticide and disease control progress Presents scientific developments from an international array of contributing authors
