Beate Brand-Saberi, 2014-10-25 This book addresses the differentiation control of skeletal muscle in different locations of the vertebrate body Particular attention is paid to novel regulatory molecules and signals as well as the heterogeneity of origin that have revealed a developmental overlap between skeletal and cardiac muscle Different functional muscle groups are the product of the evolution of the vertebrate classes making a phylogenetic comparison worthwhile for understanding the role of muscle stem cells and precursors in myogenesis New insights into the hierarchy of transcription factors particularly in the context of these different muscle groups have been gained from detailed investigations of the spatio temporal and regulatory relationships derived from mouse and zebrafish genetics and avian microsurgery Importantly epigenetic mechanisms that have surfaced recently in particular the role of MyomiRs are also surveyed With an eye to the human patient encouraging

results have been generated that identify parallels between embryonic myogenesis and regenerating myofibers due to common regulatory molecules. On the other hand, both processes differ considerably in quality and complexity of the processes employed. Interestingly, the heterogeneity in embryonic sources from which skeletal muscle groups in the vertebrate, including the human body, take origin is paralleled by differences in their susceptibility to particular muscle dystrophies as well as by the characteristics of the satellite cells involved in regeneration. The progress that has been made in the field of muscle stem cell biology with special focus on the satellite cells is outlined in this book by experts in the field. The authors review recent insights of the heterogeneous nature of these satellite cells regarding their gene signatures and regeneration potential. Furthermore, an improved understanding of muscle stem cells seems only possible when we study the impact of the cell environment on efficient stem cell replacement therapies for muscular dystrophies, putting embryological findings from different vertebrate classes and stem cell approaches into context.
