Question

Question 1: Kinematics

Two gliders with the same mass are on a horizontal air track. The gliders are initially at rest. A spring is compressed between them. The spring is released, and the gliders move apart. Which glider has the greater speed when the spring is released?

- ☐ A. Glider 1
- ☐ B. Glider 2
- ☐ C. Both are the same
- ☐ D. Not enough information

Answer: B. Glider 2

Explanation: Because the gliders have the same mass, the spring exerts the same force on both. The spring is compressed, so it exerts a force on both gliders. The glider with the greater speed when the spring is released is the one that has the greater mass.
