

Activity A:
Wave motion

Get the Gizmo ready:

- Select **Barrier with 3-cm gap** from the **Scenario** menu.

Question: What causes wave motion?

1. Predict: In this activity, you will test two hypotheses for wave motion. Circle the hypothesis you think is closest to the truth.

Hypothesis 1: Waves are sets of particles moving together due to their forward momentum.

Hypothesis 2: Waves occur when particles transmit energy to other particles in all directions but don't move far from their original positions.

2. Make connections: The hypothesis describes how some materials flow. For example, consider the mudslide shown at left. Compared to point A, point B is nearly three times farther from where the mudslide landed at the bottom of the mountain.

Why did the mudslide miss point A but hit point B?

The forward speed of the mudslide carried it to point B instead of spreading out to point A.

Which hypothesis is demonstrated by the motion of the mud?

1st Hypothesis

3. Predict: The Gizmo shows a barrier with a small gap that waves can pass through. Points A and B are equal distances from the gap.

- A. If hypothesis 1 is true, which point do you think will be hit by a wave first? Explain.

If premise 1 is true, point A will be hit first because the wave's momentum is left to right.

- B. If hypothesis 2 is true, which point do you think will be hit by a wave first? Explain.

Points A and B will be impacted simultaneously if hypothesis 2 is true because waves convey energy in all directions.
