

RST.3 Follow precisely a multistep procedure when carrying out experiments, taking measurements, or performing technical tasks.

Learning Objectives

Students will:

- Determine that a force is needed to cause a change in motion.
- Understand that friction is a force resisting motion.
- See that a moving object will continue at constant speed if no forces are acting upon it.
- Determine that larger forces cause greater changes in motion.
- Understand the relationship between speed, position, and time.
- Observe that a constant force gives rise to a constant change in speed.
- Utilize a bar graph and data table to interpret motion.

Vocabulary
force, friction, position, speed

Lesson Overview
The Force and Fan Carts Gizmo™ illustrates basic laws of force and motion. It shows a miniature cart powered only by a fan.

Students can place objects (mass) on the cart, use different surfaces (friction), and change fan speeds (force). The fan can be turned off as the cart rolls to see what results when there is no force on the cart.

The Student Exploration contains three activities.

- Activity A – Students study force and motion, using different fan speeds.
- Activity B – Students explore the effects of friction by selecting different surfaces.
- Activity C – Students investigate the speed and position data to find patterns.

Suggested Lesson Sequence

1. Pre-Gizmo activity (5 – 10 minutes)
A great way to prepare students for this Gizmo is to show them a simple fan cart. If a fan and a skateboard are available, place the fan on the skateboard and turn it on. If not, find a chair on wheels and have a student sit in it, leaning a wall or a heavy desk, and push. Or have a student put roller skates on and throw a heavy object. (Be careful!) Whichever you do, help students notice the two forces working in opposite directions.
2. Prior to using the Gizmo (10 – 15 minutes)
Before students are at the computers, pass out the Student Explorations and ask students to complete the Prior Knowledge Questions. Discuss student answers as a class, but do not provide correct answers yet. Afterwards, if possible, use a projector to introduce the Gizmo and demonstrate its basic operations. In particular, be sure students see that the fan speed can be changed during any experiment.

Teaching and Learning Online Franklin S. Allaire, Jennifer E. Killham, 2023-01-01 Science is unique among the disciplines since it is inherently hands on. However, the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we as science teachers deliver high quality experiences to secondary students in an online environment that leads to age grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al 2014, Wong et al 2018, PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments (Molnar et al 2021, Seaman et al 2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy (Brigido, Borrachero, Bermejo, Gunning, Duran, 2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

Distance Learning for Elementary STEM Amanda Thomas, 2022-08-17 This practical guide outlines a vision for online and distance STEM learning at the elementary level with creative activities based on eight STEM themes. Online and distance learning may sound fairly straightforward. Instead of learning in a classroom setting, students learn at home with the assistance of online resources. But classroom learning does not always translate easily to online settings, particularly at the elementary level where children should be actively engaging in activities, exploration, and discussion. From designing a zoo to learning to garden to exploring the night sky, you'll find eight STEM lessons that are creative, hands-on, and engaging for elementary learners. Written for teachers and parents, the book unpacks STEM integration across multiple subjects with connections to the ISTE Standards. The book also includes play-based lessons for young learners and ideas for innovative design challenges. Each of the eight lessons includes an overview of materials, resources, time, and supervision needed. Suggested resources to explore such as simulations and virtual field trips. Supplementary learning materials such as questions and quizzes. Ideas for games and reinforcement. Hands-on activities and engineering design challenges. Connections to various content areas as well as children's books, movies, and art to keep the learning going after the lesson is completed. Concluding with a model for designing online and distance STEM learning for elementary-aged children, this book will support teachers and parents in designing the types of resources and learning experiences they need for elementary students' distance learning.
