Principles of Adaptive Filters and Self-learning Systems Anthony Zaknich,2005-08-19 The topics of control engineering and signal processing continue to flourish and develop In common with general scientific investigation new ideas concepts and interpretations emerge quite spontaneously and these are then discussed used discarded or subsumed into the prevailing subject paradigm Sometimes these innovative concepts coalesce into a new sub discipline within the broad subject tapestry of control and signal processing This preliminary battle between old and new usually takes place at conferences through the Internet and in the journals of the discipline After a little more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur A new concept in control and signal processing is known to have arrived when sufficient material has evolved for the topic to be taught as a specialised tutorial workshop or as a course to undergraduate graduate or industrial engineers Advanced Textbooks in Control and Signal Processing are designed as a vehicle for the systematic presentation of course material for both popular and innovative topics in the discipline It is hoped that prospective authors will welcome the opportunity to publish a structured and systematic presentation of some of the newer emerging control and signal processing technologies in the textbook series

Learning and Soft Computing Vojislav Kecman,2001 This textbook provides a

thorough introduction to the field of learning from experimental data and soft computing Support vector machines SVM and neural networks NN are the mathematical structures or models that underlie learning while fuzzy logic systems FLS enable us to embed structured human knowledge into workable algorithms The book assumes that it is not only useful but necessary to treat SVM NN and FLS as parts of a connected whole Throughout the theory and algorithms are illustrated by practical examples as well as by problem sets and simulated experiments This approach enables the reader to develop SVM NN and FLS in addition to understanding them The book also presents three case studies on NN based control financial time series analysis and computer graphics A solutions manual and all of the MATLAB programs needed for the simulated experiments are available

Fuzzy Control of Industrial Systems Ian S. Shaw, 2013-12-20

Fuzzy Control of Industrial Systems Theory and Applications presents the basic theoretical framework of crisp and fuzzy set theory relating these concepts to control engineering based on the analogy between the Laplace transfer function of linear systems and the fuzzy relation of a nonlinear fuzzy system Included are generic aspects of fuzzy systems with an emphasis on the many degrees of freedom and its practical design implications modeling and systems identification techniques based on fuzzy rules parametrized rules and relational equations and the principles of adaptive fuzzy and neurofuzzy systems Practical design aspects of fuzzy controllers are covered by the detailed treatment of fuzzy and neurofuzzy software design tools with an emphasis on iterative fuzzy tuning while novel stability limit testing methods and the definition and practical examples of the new concept of collaborative control systems are also given In addition case studies of successful applications in industrial automation process control electric power technology electric traction traffic engineering wastewater treatment manufacturing mineral processing and automotive engineering are also presented in order to assist industrial control

systems engineers in recognizing situations when fuzzy and neurofuzzy would offer certain advantages over traditional methods particularly in controlling highly nonlinear and time variant plants and processes
