*Food Traceability* Jennifer McEntire, Andrew W. Kennedy, 2019-05-11 This book provides a picture of food traceability for all aspects of the food system recognizing the unique differences challenges and states of the industry in different types of food products as well as the different pressures and opportunities at different points in the supply chain and the research that has already been done It also provides some historical context along with the types of solutions available to the food industry and the benefits associated with better recordkeeping that go beyond the public good and impact the bottom line Whenever a food related outbreak occurs traceability is called into question When lives are at stake it is critical that the root of the problem is quickly identified to prevent further illness Once the problem is found it s just as important to contain it quickly Too often recalls expand because implicated product is not readily accounted for Mention of traceability stirs fear for many in the food industry for several reasons within a company it s not clear if responsibility for traceability lies with food safety professionals involved in recalls supply chain professionals who understand product movement IT professionals who build and maintain the recordkeeping systems or regulatory professionals who need to respond to government requests for information There is also a sense that traceability is someone else s problem Few firms admit that they are the weak link and instead tout how quickly they can perform mock recalls But traceability is about more than just recalls It is about the connectivity of the supply chain as a product and its constituents travel from the farm to the consumer Because it is a systems issue there is a sense that the investment by a single firm will be meaningless if supply chain partners don t have comparable abilities This book will address both these surrounding issues and solutions

**Ethical Traceability and Communicating Food** Christian Coff, David Barling, Michiel Korthals, Thorkild Nielsen, 2008-06-12 The theme of this book evolved from the idea of linking three concepts around food traceability ethics and informed choice We believe that the current development and implementation of traceability in the agri food sector offers an interesting way not only of handling food safety but also of addressing and communicating ethical issues arising from current food production practices Practices in the agri food sector worry food consumers as we all are since we need to eat and drink to stay alive But how can consumers act upon their concerns Paradoxically although consumers are bombarded with information on food from the media the food industry food authorities NGOs and interest groups details about how foods are actually produced is often hard to find Much of the information available is superficial conflicting or partial and it is hard for consumers seeking to make informed food choices to know which information to trust The consumers we interviewed for this project felt that information about food products was withheld and manipulated Traceability which provides a record of the history and journey of a given food and which is increasingly used in the food sector for legal and commercial reasons has the potential to communicate a more authentic picture of how food is produced

**Traceability Using Blockchain** Tharun Mohan, 2018 The central problem to be addressed in this thesis is to investigate how blockchain technology can be used to provide greater asset traceability in today's food supply chains. Blockchain is a shared distributed ledger that uses cryptography to validate and record transactions and track assets in a business network. The goal is to create a blockchain model that can be implemented across food supply chains and present the benefits and limitations in its implementation. Food provenance is one of the most challenging problems that FSC companies face today. A global supply chain network with multiple operating procedures and asymmetrical food regulations between countries makes end-to-end food tracking incidental to the food industry. A detailed literature review on the current challenges in food tracking, food safety regulations, and food supply chain design is also discussed in this research. Analysis of food illness outbreak dataset in the US between 2007-2016 is also presented to focus on two key results. Firstly, to focus the blockchain model development on food products with highest food illness outbreak incidents, and secondly, to increase IoT scanning points in certain stages of the supply chain that have recorded more than 50% of the total contamination incidents. Finally, a blockchain model is created using Hyperledger Sawtooth and its benefits over conventional information technology systems and global food tracking methods are presented. Future research studies can focus on using blockchain-enabled models to replace ERP systems, reduce food waste, and improve supply management between stages in the food supply chain.
