Publisher's description *Ageing of Infrastructure* Frank Collins, Frédéric Blin, 2018-09-21 The book addresses the problem of ageing infrastructure and how ageing can reduce the service life below expected levels The rate of ageing is affected by the type of construction material environmental exposure function of the infrastructure and loading each of these factors is considered in the assessment of ageing How do international design codes address ageing Predictive models of ageing behaviour are available and the different types empirical deterministic and probabilistic are discussed in a whole of life context Life cycle plans initiated at the design stage can ensure that the design life is met while optimising the management of the asset reducing life cycle costs and reducing the environmental footprint due to less maintenance remediation interventions and fewer unplanned stoppages and delays Health monitoring of infrastructure can be conducted via implanted probes wired or wireless or by non destructive testing that can routinely measure the durability loading and exposure environments at key locations around the facility Routine monitoring can trigger preventative maintenance that can extend the life of the infrastructure and minimise unplanned and reactive remediation while also providing ongoing data that can be utilised towards more durable future construction Future infrastructure will need to be safe and durable financially and environmentally sustainable over the lifecycle thereby raising socio economic wellbeing The book concludes by discussing the key impacting factors that will need to be addressed The author brings a strong academic and industry background to present a resource for academics and practitioners wishing to address the ageing of built infrastructure

Towards applying a green infrastructure approach in the Gauteng City-Region Christina Culwick, Samkelisiwe Khanyile, Kerry Bobbins, Stuart Dunsmore, Anne Fitchett, Lerato Monama, Raishan Naidu, Gillian Sykes, Jennifer van den Bussche, Marco Vieira, 2019-12-11 In the context of heightened climate variability thinking about ways to redesign our urban areas with more sustainable infrastructure solutions is becoming more and more important Green infrastructure GI is emerging as an alternative approach to traditional grey infrastructure in urban planning and development Its emergence can be understood in terms of the growing demand for infrastructure and services increased concerns over natural resource constraints and climate change and the negative impacts associated with traditional approaches to designing and building cities It has been proposed that GI can provide the same services as traditional

infrastructure at a similar capital cost while also providing a range of additional benefits. However, despite the increasing examples of successful urban GI applications, traditional infrastructure continues to dominate due to the lack of systematic evidence to support GI implementation. As a result, there has been an increase in calls from policy and decision makers for a greater evidence base on the benefits of GI as well as for practical guidelines on its implementation. Towards applying a green infrastructure approach in the Gauteng City Region is the GCRO's third report in its ongoing research into Green assets and infrastructure. The first two reports in this project series were more theoretically grounded and policy oriented, whereas this third report is more practical in nature. The first report explored the basic principles around GI, assessed the extent of ecological features in Gauteng, and the way governments in the province think about planning and maintenance of green assets. The second report responded to some of the challenges identified in the first report and, in particular, the importance of government officials and practitioners in exploring how international green infrastructure plans could be applied in the Gauteng context. This third report builds on the findings of the aforementioned reports and the project's CityLab series, which highlighted the need to build an evidence base as critical for garnering support for and as well as enhancing investment in the GI approach. Unlike the more theoretically grounded earlier reports, this report comprises four technical sections and practical reflections on how a GI approach could be incorporated into urban planning in the GCR and in other similar urban contexts.
