Sloan, 2019-04-12 A keto or ketogenic diet is a really amazing low carb diet that can assist you in burning fat more competently So many people by now have experienced its numerous established benefits for health weight loss and performance The diet compels the body to break down fats sooner than carbohydrates Usually the carbs in food are changed to glucose which is then moved around the body and is especially significant in aiding brain function The brain uses up lots of energy from day to day and it can not directly run on fat The brain can only function on glucose or you can say ketones Then again if little carbohydrate lingers in the diet the liver then alters the fat into fatty acids and ketone bodies Ketones are formed if you eat very few carbs which are instantaneously broken down to blood sugar and only reasonable amounts of protein A ketogenic diet helps in controlling blood sugar level It is outstanding for administering type 2 diabetes at times even leading to a total reversal of the disease This claim has been certified in studies It makes wonderful sense since
