Verma, Shivlata Landhanam, Jaya Chakraborty, Jyotirmayee Pradhan, Poulomi Sarkar, 2020-01-10 It is specifically designed to boost the cutting edge knowledge of students and improve their focus on the next generation developmental skills on Microbiology for making it as their carrier This book can bring a light for the students those are going to write in the CSIR UGC NET ICMR NET DBT JRF PG Combined entrance exams ICAR NET ASRB NET GATE SLET SAUs and other combined entrance examinations All the questions of this book are assembled from standard textbooks of microbiology covering all the area of microbiology The authors hope this book will surely assist the young minds to crack the examinations in a easy and simple way and will definitely useful to the researchers to clarify the doubts that often come during the research work We also request and welcome our judging audience readers to send their valuable suggestions for further improvement of this book **Automation In Clinical Microbiology** James Wallace Jorgenson, 2018-01-18 The chapters of this book describe numerous successful examples of automation in microbiology e g radiometric detection of bacteremia instruments for detection of bacteriuria machines for organism identification and susceptibility testing and automated antigen and antibody measurement systems In addition there are discussions of exciting but not yet proven methodologies such as chromatography flow cytometry and other applications of radiometry There are also important discussions regarding improved means of data communication and ways to improve the clinician's use of test results Lastly there are candid assessments of the best and worst aspects of the current spectrum of automated instruments for microbiology It is hoped that the reader of this volume will be left with a feeling of excitement at the possibilities that lie ahead for application of instrument techniques in the diagnosis of infectious diseases

Microbiology of Solid Waste Anna C. Palmisano, Morton A. Barlaz, 2020-07-09 Interest in solid waste disposal has been growing since the early 1960s when researchers emphasized the potential for solid waste to harbor pathogenic microorganisms Since then society has become more interested in the environmental impacts of solid waste treatment and disposal and how biological processes are used to minimize these impacts This new text provides a basic understanding of the unique microbial ecosystems associated with the decomposition of municipal solid waste MSW It addresses the challenges of sampling and assaying microbial activities in MSW and describes preferred methods The decomposition of MSW under anaerobic conditions in landfills and digestors is described as well as under aerobioconditions during composting The Microbiology of Solid Wastes discusses the need to consider MSW as an integrated system of collection recycling treatment and disposal A better understanding of solid waste microbiology will contribute to safe and economical solid waste management Microbiologists environmental engineers and solid waste managers will all find this a useful reference

Techniques to Measure Food Safety and Quality Mohidus Samad Khan, Mohammad Shafiur Rahman, 2021-09-22 This book addresses the basic understanding of food contaminants and their sources followed by the techniques to measure food

safety and quality It is divided into four parts Part A sources of contaminants in foods their associated health risks and integrated management and alternative options to minimize contaminants Part B Technological assessment of conventional methods and selected advanced methods for the detection identification and enumeration of microbial contaminants Part C Technological assessment of different chemical measurements techniques and Part D Technological assessment of different instrumental techniques to assess sensory properties of foods Food safety is a growing concern due to the increase in food borne illnesses caused by food adulteration excessive use of pesticides use of chemical preservatives and artificial fruit ripening agents microbial contaminations and improper food handling Chemical contaminants in food could be transferred from environmental or agrochemical sources personal care products and other by products of water disinfects In addition microbial food safety can be threatened due to the presence of many pathogens such as Salmonella Escherichia coli Clostridium botulinum Staphylococcus aureus and Listeria monocytogenes in foods Globally strict regulations are imposed to limit the potential contaminants in foods Development of accurate rapid and inexpensive approaches to test food contamination and adulteration would be highly valued to ensure global food safety There are existing processes to ensure safety of food products from chemical and microbial contaminants Apart from the existing measurement technologies varieties of new techniques are also being emerged and these could be potential to ensure food safety and quality In addition to chemical and microbial properties sensory properties such as texture mouth feel flavor and taste are among the most important attributes of food products to ensure their acceptability by consumers Two approaches are available to evaluate sensory properties of food products namely subjective and objective analyses The responses are perceived by all five senses smell taste sight touch and hearing The approach used in sensory evaluation varies depending on the types of foods and the ultimate goal of the testing Sensory attributes are the most important quality parameters after ensuring the safety of foods
