*Introductory Circuit Analysis* Robert L. Boylestad, 1990-02     *Microcomputers and Laboratory Instrumentation* David J. Malcolm-Lawes, 2012-12-06 The invention of the microcomputer in the mid 1970s and its subsequent low cost proliferation has opened up a new world for the laboratory scientist Tedious data collection can now be automated relatively cheaply and with an enormous increase in reliability New techniques of measurement are accessible with the intelligent instrumentation made possible by these programmable devices and the ease of use of even standard measurement techniques may be improved by the data processing capabilities of the humblest micro The latest items of commercial laboratory instrumentation are invariably computer controlled although this is more likely to mean that a microprocessor is involved than that a versatile microcomputer is provided along with the instrument It is clear that all scientists of the future will need

some knowledge of computers if only to aid them in mastering the button pushing associated with gleaming new instruments. However to be able to exploit this newly accessible computing power to the full the practising laboratory scientist must gain sufficient understanding to utilise the communication channels between apparatus on the laboratory bench and program within the computer.
