Hiroataka Nakayama, Yeboon Yun, Min Yoon, 2009-06-12 Many kinds of practical problems such as engineering design industrial management and financial investment have multiple objectives conflicting with each other Those problems can be formulated as multiobjective optimization In multiobjective optimization there does not necessarily a unique solution which minimizes or maximizes all objective functions We usually face to the situation in which if we want to improve some of objectives we have to give up other objectives Finally we pay much attention on how much to improve some of objectives and instead how much to give up others This is called trade off Note that making trade off is a problem of value judgment of decision makers One of main themes of multiobjective optimization is how to incorporate value judgment of decision makers into decision support systems There are two major issues in value judgment 1 multiplicity of value judgment and 2 dynamics of value judgment The multiplicity of value judgment is treated as trade off analysis in multiobjective optimization On the other hand dynamics of value judgment is difficult to treat However it is natural that decision makers change their value judgment even in decision making process because they obtain new information during the process Therefore decision support systems are to be robust against the change of value judgment of decision makers To this aim interactive programming methods which search a solution while eliciting partial information on value judgment of decision makers have been developed Those methods are required to perform explicitly for decision makers attitude **El-Hi Textbooks in Print**, 1984
