Whole School Approaches to Sustainability Arjen E.J. Wals,Birgitte Bjønness,Astrid Sinnes,Ingrid Eikeland,2024-06-22 In response to urgent global sustainability challenges Education for Sustainable Development ESD and Global Citizenship Education have been prioritized in the United Nations Agenda 2030 under SDG 4 7 There is a growing awareness that treating concepts such as global citizenship sustainable development climate urgency and health and well being as separate subjects or topics to be added to a curriculum is ineffective as they are highly interconnected Additionally this approach is problematic as schools already have an overcrowded curriculum This edited volume brings together a range of scholars and reflective practitioners from across the globe who are investigating and enacting a whole school approach WSA in education for sustainability While the WSA and related approaches such as those advocated by EcoSchools are becoming more popular there is a lack of understanding of their underlying principles and the different manifestations in diverging socio cultural contexts at different educational levels This collection of chapters provides a deeper understanding of the WSA while also addressing its effectiveness possibilities for upscaling professional development needs for WSA practitioners interlinkages with more conventional curriculum requirements expectations of students and parents and more This is an open access book

Geography of Education Colin Brock,2016-09-22 Geography of Education sets out the scope of this emergent interdisciplinary field It illustrates the essential affinity of geographical and educational studies by emphasising the geographical factors influencing formal education systems and other forms of knowledge transfer Colin Brock begins by arguing the theoretical synergy that exists between the nature of both geography and educational studies as disciplines This is then exemplified by an analysis of the emergence of systems of schooling under the influence of religious political and

economic forces The author also considers informal and non formal modes of education and argues that the huge diversity of such provision creates a rich resource for research into geographies of education In the final chapters the author turns his attention to the role of cyberspace which has its own geography in learning and considers education as a form of humanitarian response to issues of environmental sustainability By bringing together a wide range of themes and topics relating to both education and geography Colin Brock argues that the geographical approach should inform the evolution of all types of educational provision around the world
