Anthony, Umberto De Girolami, Franck Bielle, Danielle Seilhean, 2025-05-27 Escourolle and Poirier's Manual of Basic Neuropathology has a long standing tradition of providing complete and concise descriptions of the principal diseases of the nervous system limiting clinicopathological correlations and pathophysiological considerations to the essential principles With a target audience of professionals hoping to gain their first detailed understanding of the pathology underlying neurologic disease the manual assumes that the reader has familiarity with the basic concepts of neuroanatomy histology and general principles of pathology as well as the basic principles of clinical neurology As a result the manual has been very popular with physicians wanting a brief introductory text including residents in pathology neurology neurosurgery and psychiatry The Manual is also popular with staff pathologists and neurologists neuroscientists and even some medical students with interests in clinical neurosciences In the face of remarkable advances in basic neuroscience molecular biology and genetics which are fields of research that have direct impact on neuropathology the seventh edition provides a critical update that incorporates the most recent molecular definitions The Manual does not

emphasize radiological images as this information is available elsewhere Rather it describes the pathologic characteristics of neurologic disease with extensive macroscopic illustrations and whole brain sections Progress in molecular biology and genetics has revolutionized the laboratory diagnosis of many groups of neurological diseases The classification of neurologic disease often includes molecular markers and as a result the content of molecular and genetic data is included whenever it is required for neuropathological classification The seventh edition now includes immunohistochemical in situ identification of abnormal proteins or abnormal distribution of proteins in neuropathology Gene sequencing or mutated constructs permits the identification of specific gene mutations and has led to considerable advances in the understanding and classification of degenerative neoplastic and developmental diseases In fact molecular and genetic data are now a crucial component of the defining criteria for the diagnosis and classification of intracranial tumors data that is essential for the neuro oncologist neurosurgeon and radiation therapist to determine prognosis and optimal personalized treatments The classification of brain tumors has also been updated by the World Health Organization in 2021 Genetic data have also completely changed the understanding classification and diagnosis of hereditary metabolic disorders as well as many classes of myopathies and neuropathies Newly emerging diseases in the Seventh Edition include chronic traumatic encephalopathy associated with repeated head trauma late onset cognitive disorders including PART and LATE and new viral syndromes including COVID and Zika virus Throughout the Manual draws on a world wide expertise with authors from four continents collaborating to provide a remarkable breadth of experience
