Swarm Intelligence for Iris Recognition Zaheera Zainal Abidin, 2021-11-24 Iris recognition is one of the highest accuracy techniques used in biometric systems The accuracy of the iris recognition system is measured by False Reject Rate FRR which measures the authenticity of a user who is incorrectly rejected by the system due to changes in iris features such as aging and health condition and external factors that affect iris image for instance high noise rate External factors such as technical fault occlusion and source of lighting that causes the image acquisition to produce distorted iris images create error hence are incorrectly rejected by the biometric system FRR can be reduced using wavelets and Gabor filters cascaded classifiers ordinal measures multiple biometric modalities and a selection of unique iris features Nonetheless in the long duration of the matching process existing methods were unable to identify the authenticity of the user since the iris structure itself produces a template changed due to aging In fact the iris consists of unique features such as crypts furrows collarette pigment blotches freckles and pupils that are distinguishable among humans Earlier research was done by selecting unique iris features However these had low accuracy levels A new way of identifying and matching the iris template using the nature inspired algorithm is described in this book It provides an overview of iris recognition that is based on nature inspired environment technology The book is useful for students from universities polytechnics community colleges practitioners and industry practitioners *Computer Science Engineering and Emerging Technologies* Rajeev Sobti, Rachit Garg, Ajeet Kumar
