

Tangent

If we were to find the tangent of angle B, you would take the opposite side (the side with the length of 4), and divide it by the adjacent side (the side with the length of 3). You get $4/3$ for your tangent

An interesting thing we can observe is that the tangents of the 2 angles that are not 90 degrees are simply reciprocals of each other!

WILSON/ADDYMAN,2013-06-29 Since the first edition of this book was written in 1977 there has been a tremendous increase in the use of Pascal This increased use has had two significant effects 1 It has produced a better understanding of the facilities of Pascal and their use 2 It has fostered the production of the ISO standard for Pascal This second edition reflects both this better understanding and the clarifications and changes to Pascal which have resulted from the production of the BS/ISO Pascal standard The standard BS 6192 which supplies the technical content for ISO 7185 is the definitive document on Pascal My work on the Pascal standard has convinced me that the description of a programming language may be tutorial or it may be definitive or it may be neither The chapters of this book do not constitute a definitive description of Pascal They are essentially tutorial The book is based on an introductory lecture course given at Manchester In addition to lectures the course consists of two kinds of practical work The first is based on the solution of short pencil and paper exercises The second requires the student to write complete programs and run them using interactive computer terminals Each chapter of the book concludes with exercises and problems suitable for these purposes Although solutions to all of these are not presented in the book teaching staff may obtain them by application to the authors **Reeds Introductions:**
