

Writing a research paper

Introduction

The two first types of papers are considered first of all although the ideas below are applicable to the other types of papers as well.

It is difficult for a young researcher to write and submit his/her paper. S/he is thinking that the research or the manuscript is not good enough for publishing. Perfect papers are never published because there are no perfect paper. Good papers are published. These papers put the scientific discussion in the field forward (Day 2006).

You should not be afraid of rejection. Reviewing of your manuscript gives you invaluable information about the research in your field and about writing research papers. Publishing in valued journals and collections is an inevitable part of your career as a university lecturer.

Let us look at some success criteria in publishing.

1. The paper describes a good research. The research uses current ideas and methods appropriately. It is grounded in theory and adds something to it. Good research is rigorous, systematic and very focused (Day 2006). You should discuss one problem in one paper, although there can be different approaches to the problem in your paper. Large samples of subjects facilitate the acceptance of your manuscript.
2. You answer the question why your paper is important. The importance can be in wider principles, which emerged from your research. You can describe how people can use the findings of your research and how other researchers can develop the work further. Papers on popular topics (gender, collectivism, narcotics, etc.) are easier to publish (Toomela 2003). A good paper arouses the interest of readers.
3. You have been reading the best papers in your research field and you give an overview of the contemporary trends in the field. Your paper will be published if it adds something to the international discussion in the field. You can contribute to the discussion if you know the current state of affairs.
4. The paper is written according to the traditions of scientific writing. Scientists are accustomed to read the papers with traditional elements, structure and style. If you violate these traditions, then your paper is difficult to understand and editors are eager to reject such manuscripts. The most thorough presentation of these traditions is published by the American Psychological Association (Publication manual ... 2003).

Below we will discuss the writing and submitting of manuscripts. However, we begin with selecting the appropriate journal.

From Research to Manuscript Michael Jay Katz, 2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers
