Problems, Philosophy and Politics of Climate Science Guido Visconti, 2017-09-17 This book is a critical appraisal of the status of the so called Climate Sciences CS These are contributed by many other basic sciences like physics geology chemistry and as such employ theoretical and experimental methods In the last few decades most of the CS have been identified with the global warming problem and numerical models have been used as the main tool for their investigations The produced predictions can only be partially tested against experimental data and may represent one of the reasons CS are drifting away from the route of the scientific method On the other hand the study of climate faces many other interesting and mostly unsolved problems think about ice ages whose solution could clarify how the climatic system works As for the global warming while its existence is largely proved scientifically it can be solved only with a large experimental effort carried out for a few decades Problems can arise when not proved hypotheses are adopted as the basis for public policy without the recognition that they may be on shaky ground The strong interactions of the Global Warming GW with the society create another huge problem of political nature for the CS The book argues that the knowledge gained so far on the specific GW problem is enough for the relevant political decisions to be taken and that Climate Science should resume the study of the climate system with appropriate means and methods The book introduces the most relevant concepts needed for the discussion in the text or in appropriate appendices and it is directed to the general public with upper undergraduate background Each chapter closes with a debate between a climate scientist and a humanist to reflect the discussions between climate science and philosophy or climate scientists and society *Sustainable Macroeconomics, Climate Risks and Energy Transitions* Unurjargal Nyambuu, Willi Semmler, 2023-05-30 Given the industrialized world s historical dependence on fossil fuel based energy resources and the now realized perils of moving beyond the earth s carbon budget this book explores the

myriad challenges of climate change and in reaching a low carbon economy Reconciling the medium term competing yet frequently complementary needs for transition policies the book provides guidelines for complex and often conflicting climate policy tasks The book presents empirical trends in the use of carbon emitting resources and evaluates market driven short termism and its adverse impact on resource use and the environment it emphasizes a medium term macroeconomic perspective for the transition The authors attempt a paradigm shift towards a framework of sustainable macroeconomics They survey relevant historical models conduct empirical and numerical analyses of the climate change relevant dynamic models provide empirical illustrations and evaluate diverse policy options and implementations together with their historical evolution New analytical issues are also considered e g strategic behavior in the energy and resource sectors energy competition and the dynamics of market shares in new energy technology and supporting policies for dealing with the tipping points encountered in climate change The authors suggest a multitude of market based strategies and public fiscal monetary and financial policies and longer run planning for resource extraction all suitable for driving sustainable growth and a transformation of the energy sector The book also examines the multiple delaying forces slowing the transition to a low carbon economy these typically arise from short termism lock ins irreversibility leakages non cooperative games and other political strategies Thus they explain the snail s pace evolution of current national and global climate policies The book will appeal to scholars and students of economics and environmental science It is also relevant for policymakers and practitioners in multilateral institutions research institutions as well as governments and ministries of countries interested in alternative energy sources climate economists and those who study the implementation of sustainable and low carbon based policies
