

Rounding Whole Numbers

When your friend tells you he scored 497 or 509 on a video game, in your mind you are probably thinking 500. You rounded both numbers to a more convenient number for you to use.

Rounding is changing the exact value of a number to a number that is more convenient or easier to use. Rounding a number may increase or decrease a number's value. If there are 37 people in the room and you say about 40, you rounded up, increasing the number's value. If there are 105 people in the room and you say 100, you rounded down, decreasing the number's value.

THOUSANDS				ONES		
4	2	3	8	5	6	7
ONE MILLIONS	HUNDRED THOUSANDS	TEN THOUSANDS	ONE THOUSANDS	HUNDREDS	TENS	ONES
PLACE VALUE						

Rounding is not difficult. You must know the place value of the digits in the numbers you will round. Look at the chart on the left and review the place value of each digit.

To round a whole number, you must first identify the place value to be rounded.

Here are two examples of rounding to the nearest thousand. Notice the difference.

2,367

Round to the nearest **thousand**.

12,367

Look to the **right**.

Is the number to the right 5 or above? Or is it 4 or lower? 3 is lower than 4 so the 2 in the thousands place **stays the same**. All the digits to the right of the thousands place change to zeros:

The new rounded number is: **12,000**

12,667

Round to the nearest **thousand**.

12,667

Look to the **right**.

Is the number to the right 5 or above? Or is it 4 or lower? 6 is higher than 5 so the 2 in the thousands place **changes by adding one**. All the digits to the right of the thousands place still change to zeros:

The new rounded number is: **13,000**

***Helpful rhyme to help you in rounding numbers:**

Five or above,
give it a shove
(add one).

Four or below,
you keep it low
(no change).

Lesson Plan Introduction To Whole Numbers
