

Unit 5: Long-Run Consequences of Stabilization Policies

PPT 5.1

Putting Fiscal and Monetary Policy Together:

- Suppose there is already a positive output gap and the government increases spending.
- What could the central bank do to prevent more inflation and keep interest rates stable?

The central bank could lower the money supply by selling bonds.

PPT 5.1

Assume there's a negative output gap. What combined fiscal and monetary policies could close the gap?

Fiscal Policy: $\uparrow G$ and/or $\downarrow T$

Monetary Policy: $\uparrow MS$ and/or $\downarrow R$

- Money supply \uparrow
- Interest rates \downarrow
- Bank loans \uparrow
- AD \uparrow
- Price level \uparrow
- Real Output \uparrow
- Unemployment \downarrow
- Budget surplus \downarrow
- National debt \uparrow

Crowding Out and Loanable Funds

Assume the government increases deficit spending:

What will happen to the demand for loanable funds, the real interest rate, and private domestic investment?

$D \uparrow \rightarrow RIR \uparrow \rightarrow I \downarrow$

The total number of loans increased, but that was due to public borrowing. Private borrowing decreases.

What is the long-run impact of higher real interest rates?

Less economic growth because investment falls. Less capital stock.

Crowding out: the adverse effect of government borrowing on interest-sensitive private sector spending

1. Budget deficit: when annual gov. spending and transfer payments are greater than tax revenue

2. Budget Surplus: when annual gov. spending and transfer payments are less than tax revenue

3. National debt: the accumulation of all the budget deficits over time

Deficit Spending

- If the Government increases spending without increasing taxes they will increase the annual deficit and the national debt.

Output and Employment Fluctuations Klaus F. Zimmermann,2012-12-06 This book consists of four parts I Labour demand and supply II Productivity slowdown and innovative activity III Disequilibrium and business cycle analysis and IV Time series analysis of output and employment It presents a fine selection of articles in the growing field of the empirical analysis of output and employment fluctuations with applications in a micro econometric or a time series framework The time series literature recently has emphasized the careful testing for stationarity and nonlinearity in the data and the importance of cointegration theory An essential part of the papers make use of parametric and non parametric methods developed in this literature and mostly connect their results to the hysteresis discussion about the existence of fragile equilibria A second set of macro approaches use the disequilibrium framework that has found so much interest in Europe in recent years The other papers use newly developed methods for microdata especially qualitative data or limited dependent variables to study microeconomic models of behaviour that explain labour market and output decisions **Macroeconomics** John B.
