Summary of Flow Modulation and Fluid-Structure Interaction Findings Wolfgang Schröder, 2010-05-16 The Collaborative Research Center SFB 401 Flow Modulation and Fluid Structure Interaction at Airplane Wings investigates numerically and experimentally fundamental problems of very high capacity aircraft having large elastic wings This issue summarizes the findings of the 12 year research program at RWTH Aachen University which was funded by the Deutsche Forschungsgemeinschaft DFG from 1997 through 2008 The research program covered the following three main topics of large transport aircraft i Model flow wakes and vortices of airplanes in high lift configuration ii Numerical tools for large scale adaptive flow simulation based on multiscale analysis and a parametric mapping concept for grid generation and iii Validated computational design tools based on direct aeroelastic simulation with reduced structural models

Progress in Computational Flow-Structure Interaction Werner Haase, Vittorio Selmin, Bengt Winzell, 2013-04-17 Aircraft design processes require extensive work in the area of both aerodynamics and structure forming an environment for aeroelasticity investigations Present and future designs of European aircraft are characterized by an ever increasing aircraft size and performance Strong weight saving requirements are met by introduction of new materials leading to more flexible structure of the aircraft Consequently aeroelastic phenomena such as vortex induced aeroelastic oscillations and moving shock waves can be predominant and may have a significant effect on the aircraft performance Hence the ability to estimate reliable margins for aeroelastic instabilities flutter or dynamic loads buffeting is a major concern to the aircraft

designer As modern aircrafts have wing bending modes with frequencies that are low enough to influence the flight control system demands on unsteady aerodynamics and structural analysis to predict flight control effectiveness and riding comfort for passengers are extremely high Therefore the aircraft industries need an improved capacity of robust accurate and reliable prediction methods in the coupled aeroelastic flight mechanics and loads disciplines In particular it is necessary to develop improve and calibrate the numerical tools in order to predict with high level of accuracy and capability complex and non classical aeroelastic phenomena including aerodynamic non linearities such as shock waves and separation as well as structural non linearities e g control surface free play Nowadays robust methods for structural analysis and linearised unsteady aerodynamics are coupled and used by the aircraft industry to computationally clear a new design from flutter

Basics of Fluid Mechanics and Introduction to Computational Fluid Dynamics Titus Petrila,Damian Trif,2006-06-14 The present book through the topics and the problems approach aims at filling a gap a real need in our literature concerning CFD Computational Fluid Dynamics Our presentation results from a large documentation and focuses on reviewing the present day most important numerical and computational methods in CFD Many theoreticians and experts in the field have expressed their interest in and need for such an enterprise This was the motivation for carrying out our study and writing this book It contains an important systematic collection of numerical working instruments in Fluid Dynamics Our current approach to CFD started ten years ago when the University of Paris XI suggested a collaboration in the field of spectral methods for fluid dynamics Soon after preeminently studying the numerical approaches to Navier Stokes nonlinearities we completed a number of research projects which we presented at the most important international conferences in the field to gratifying appreciation An important qualitative step in our work was provided by the development of a computational basis and by access to a number of expert softwares This fact allowed us to generate effective working programs for most of the problems and examples presented in the book an aspect which was not taken into account in most similar studies that have already appeared all over the world

Fluid Dynamics Constantine Pozrikidis,2009-06-16 Ready access to computers has defined a new era in teaching and learning The opportunity to extend the subject matter of traditional science and engineering curricula into the realm of scientific computing has become not only desirable but also necessary Thanks to portability and low overhead and operating cost experimentation by numerical simulation has become a viable substitute and occasionally the only alternative to physical experimentation The new framework has necessitated the writing of texts and monographs from a modern perspective that incorporates numerical and computer programming aspects as an integral part of the discourse Under this modern directive methods concepts and ideas are presented in a unified fashion that motivates and underlines the urgency of the new elements but neither compromises nor oversimplifies the rigor of the classical approach Interfacing fundamental concepts and practical methods of scientific computing can be implemented on different levels In one approach theory and implementation are kept complementary and presented in a sequential fashion In another approach the coupling

involves deriving computational methods and simulation algorithms and translating equations into computer code instructions immediately following problem formulations Seamlessly interjecting methods of scientific computing in the traditional discourse offers a powerful venue for developing analytical skills and obtaining physical insight
