[MATLAB ESSENTIALS FOR PROBLEM SOLVING](#) MANOJ KHANNA, GEETA BHATT, PAWAN KUMAR, 2016-06-14 This textbook introduces powerful computational software tool called MATLAB. The main objective of this book is to expose the readers to MATLAB features that integrate computation, visualization, and programming in an easy-to-use environment. This book covers built-in functions of MATLAB commands and their applications in topics of mathematical physics and engineering mathematics. The book is written in a very simple language, and chapters are arranged sequentially. Each topic covered in this book has its corresponding theoretical explanation prior to its MATLAB execution. The authors explain concepts with the help of screenshots of the MATLAB software and programming codes with their outputs. This approach not only creates a direct link between the book and the MATLAB software but also imbibes the feeling of actual interaction with MATLAB software. A sufficient number of examples based on MATLAB programming codes have been worked out so that students can grasp the concepts, the ideas, and the results in an easy way. At the end of each chapter, students will have a chance to answer several application-based questions in exercise. All these features make this book to be used as a textbook for theoretical learning as well as for laboratory course. The book is suitable for the undergraduate and postgraduate students of mathematics, physics, instrumentation, and electronics. The undergraduate students of engineering will also find this book useful. [Linear Fresnel Reflector Systems for Solar Radiation Concentration](#) Stavros Karathanasis, 2019-01-30 This book offers a complete guide to designing Linear Fresnel Reflector Systems for concentrating solar radiation. It includes theoretical analyses, computational tools, and mathematical formulae to facilitate the development, design, construction, and application of these systems. In

addition the book presents a concise yet thorough treatment of the theory behind these systems and provides useful and efficient calculation procedures that can be used to model and develop their practical applications Along with the theoretical analyses provided in the book the physical background is explained using mathematical formulae illustrations graphs and tables Methods are presented for solving the non linear mathematical systems that describe a significant variety of cases In addition MATLAB codes are supplied both in the text and online Consequently readers interested in applying the methodology presented here will have all the source codes at hand allowing them to easily expand on them by introducing appropriate modifications for their respective design configuration Given its scope the book will be of interest to engineers and researchers who can use their scientific background to help them develop more energy efficient Linear Fresnel Reflector systems It will also appeal to students studying these systems for the first time as it supplies a comprehensive overview of their theoretical analysis and applications
