When Chemistry Meets Biology - Generating Innovative Concepts, Methods and Tools for Scientific Discovery in the Plant Sciences Erich Kombrink, Markus Kaiser, 2016-08-12 Biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems This is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation or protein degradation In contrast to animal systems which are nurtured from drug research the systematic development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes In particular when small molecules are integrated into genetic strategies thereby defining chemical genetics they may help to circumvent inherent problems of classical forward genetics There are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach These include the unraveling of molecular mechanisms and critical steps in hormone signaling activation of defense reactions and dynamic intracellular processes The intention of this Research Topic of Frontiers in Plant Physiology is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges The research topic covers diverse aspects of plant chemical biology including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources which rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound s activity selectivity and ultimately the identification of its protein target s and mode of action which is yet the biggest challenge of all Such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease New methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology In addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments To achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists The development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology The current Research Topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions

Schmidt,Stefan Borgwardt,2015-04-22 Nothing provided *Hydrogen Production and Remediation of Carbon and Pollutants*

Eric Lichtfouse,Jan Schwarzbauer,Didier Robert,2015-09-09 This book details first the chemistry of hydrogen production from biomass Solutions to the CO₂ issue are given in three chapters which describe CO₂ photo catalytic reduction CO₂ sequestration in terrestrial biomass and plants as renewable fuels Further chapters review the selenium cycle in ecosystems advanced processes to treat water and ecological ways to dye textiles Society growth during the last century has almost entirely relied on the carbon economy which is the use of fossil fuels for energy and materials The carbon economy has provided and will still provide many benefits However the increasing use of fossil fuels is partly responsible for the increase of atmospheric CO₂ concentrations and in turn global warming There is therefore an urgent need for cleaner fuels such as hydrogen as well as a need for a carbon neutral economy where each emitted CO₂ molecule is fast sequestered in plants algae soils sub soils and sediments Emerging Nanomaterials Hamid R. Taghiyari,Jeffrey J. Morrell,Azamal

Husen,2022-12-05 Bio based materials including those containing wood will become increasingly important as we move to a bio based economy Among their many attributes it is vitally important that these materials are renewable sustainable with proper management and environmentally benign Wood remains one of our most important bio based materials While it is an amazing material wood still has negative attributes and drawbacks that can affect performance including dimensional instability when wetted vulnerability to fire and high temperatures and susceptibility to biodeterioration A variety of treatments have been developed to overcome these weaknesses Among the most exciting of these treatments are nanomaterials These materials have some exceptionally attractive properties for improving timber performance and have been the subject of intensive research over the past decade There is a tremendous need for a single comprehensive source of information on this rapidly emerging subject with tremendous potential to enhance the performance of a variety of bio based materials This book contains 10 chapters each compiled by different author s who are considered the top researcher s in

their respective fields The chapters begin with some basic background on nanomaterials and their synthesis then explore different areas for potential applications and conclude with a review of the emerging questions about nanomaterial safety The book is designed to provide the latest information and know how on application and utilization of different nanomaterials to improve the properties of wood and wood based composite panels The contents cover some main topics in the industry including improving physical and mechanical properties increasing resistance to biodegradation including fungi and insects developing wood plastic composites WPC applying nanomaterials in paper and board industry and emergence of transparent wood and radiation shielding It also covers the use of nanomaterials to improve the performance of paints and finishes used for forest products The book provides a single location for those interested in the field to begin

Biological Outlook to Improve the Nutritive Quality of Bakery Products Gaurav Sanghvi, Nitin Kumar Singh, Ashok Kumar Bishoyi, Sanket J. Joshi, 2025-01-02 This book aims to bring the focus on biological viewpoint and alternatives for producing the baked goods as the confectionary is a major market segment comprising of the sugar and baked products The bakery products include major segments including cereals bread chocolates cookies and other confectionary items This book provides the data regarding the market of baked goods as it is forecasted to increase at growth rate of 5.8% CAGR and it is expected to reach around its growth around 7% by 2025 Fortune insights 2022 The book also classifies amongst the major consumers worldwide Asia pacific contributes around 43% western Europe contributes around 22% while Africa continent represents as smallest group of consumers for baked confectionary consumers The book provides information regarding health concerns as baked goods are liked by population of all ages As per the data mentioned above the bakery goods are consumed heavily without clear insights about its health concerns Majority of baked goods are made up of all purpose flour having serious risk concerns

impact on health and higher consumption of bakery goods can increase sugar cholesterol level and can also cause further problem in liver or heart functions Although gluten free multigrain baked confectionaries are now a day s available in the market but the still the better understanding of the bio based products is need of current time The biological viewpoint especially for the bakery goods can serve as initial point for better handling baked goods in context of upbringing of healthy society The book targets students and researchers interested in interdisciplinary research and devising novel biological applications with special focus on bakery products Living machines Tony J. Prescott,Nathan Lepora,Paul F. M. J Verschure,2018-04-13 Contemporary research in science and engineering is seeking to harness the versatility and sustainability of living organisms By exploiting natural principles researchers hope to create new kinds of technology that are self repairing adaptable and robust and to invent a new class of machines that are perceptive social emotional perhaps even conscious This is the realm of the living machine Living machines can be divided into two types biomimetic systems that harness the principles discovered in nature and embody them in new artifacts and biohybrid systems in which biological entities are coupled with synthetic ones Living Machines A handbook of research in biomimetic and biohybrid systems surveys this flourishing area of research capturing the current state of play and pointing to the opportunities ahead Promising areas in biomimetics include self organization biologically inspired active materials self assembly and self repair learning memory control architectures and self regulation locomotion in air on land or in water perception cognition control and communication Drawing on these advances the potential of biomimetics is revealed in devices that can harvest energy grow or reproduce and in animal like robots that range from synthetic slime molds to artificial fish to humanoids Biohybrid systems is a relatively new field with exciting and largely unknown potential but one that is likely to shape the future of humanity This book surveys progress towards new kinds of biohybrid such as robots that merge electronic neurons with biological tissue micro scale machines made from living cells prosthetic limbs with a sense of touch and brain machine interfaces that allow robotic devices to be controlled by human thought The handbook concludes by exploring some of the impacts that living machine technologies could have on both society and the individual exploring questions about how we will see and understand ourselves in a world in which the line between the natural and the artificial is increasingly blurred With contributions from leading researchers from science engineering and the humanities this handbook will be of broad interest to undergraduate and postgraduate students Researchers in the areas of computational modeling and engineering including artificial intelligence machine learning artificial life biorobotics neurorobotics and human machine interfaces will find Living Machines an invaluable resource *Air and Water Pollution Annual Report* National Measurement Laboratory (U.S.),1964 *Remote Sensing of Atmospheric Pollution* Yang Liu,Jun Wang,Omar Torres,2018-07-05 This book is a printed edition of the Special Issue Remote Sensing of Atmospheric Pollution that was published in Remote Sensing *Toxic Politics* Yanzhong Huang,2020-10-15 Environmental degradation in China has not only brought a wider range of diseases and other

health consequences than previously understood it has also taken a heavy toll on Chinese society the economy and the legitimacy of the party state In *Toxic Politics* Yanzhong Huang presents new evidence of China's deepening health crisis and challenges the widespread view that China is winning the war on pollution Although government leaders are learning stricter and more centralized policy enforcement measures have not been able to substantially reduce pollution or improve public health Huang connects this failure to pathologies inherent in the institutional structure of the Chinese party state which embeds conflicting incentives for officials and limits the capacity of the state to deliver public goods *Toxic Politics* reveals a political system that is remarkably resilient but fundamentally flawed Huang examines the implications for China's future both domestically and internationally

Acute Brain Impairment Philip V Peplow, Svetlana A Dambinova, Thomas A Gennarelli, Bridget Martinez, 2017-11-17 A rise in the number of young and old patients suffering from a stroke or traumatic brain injury has led to the need for better drug development and treatment as well as diagnosis and prevention of ischemic stroke and traumatic brain injury This book provides a comprehensive overview of scientific advancements in these areas Chapters provide the latest knowledge in neuroscience biotechnology and personalized medicine applicable to acute brain injuries Development of neuroprotective drugs is treated in detail Chemical biomarkers for detection imaging and preventative strategies are covered to provide medicinal chemists with a broad view of translational aspects of the field This book will be useful to postgraduate students and researchers in medicinal chemistry and pharmacology as well as specialists in the acute brain injury field

Microencapsulation Bartosz Tylkowski, Marta Giamberini, Susana Fernandez Prieto, 2020-04-06 Microencapsulations may be found in a number of fields like medicine drug delivery biosensing agriculture catalysis intelligent microstructures and in many consumer goods This new edition of *Microencapsulation* revises chapters to address the newest innovations in fields and adds three new chapters on the uses of microencapsulations in medicine agriculture and consumer products

Microencapsulation, 2015-11-13 Microencapsulation has become a promising technology for new applications in fields like drug delivery biosensing biomaterials catalysis intelligent microstructures and microsystems as well as in the field of consumer goods This book is written by authors from academia and industry and aims to present industrial adoption of microcapsules as an innovative solution for problems concerning environmentally friendly production methods health protection and increase of citizen daily life standard and decrease of its costs

The Runes of Evolution Simon Conway Morris, 2015-06-30 How did human beings acquire imaginations that can conjure up untrue possibilities How did the Universe become self aware In *The Runes of Evolution* Simon Conway Morris revitalizes the study of evolution from the perspective of convergence providing us with compelling new evidence to support the mounting scientific view that the history of life is far more predictable than once thought A leading evolutionary biologist at the University of Cambridge Conway Morris came into international prominence for his work on the Cambrian explosion especially fossils of the Burgess Shale and evolutionary convergence which is the process whereby organisms not closely related not

monophyletic independently evolve similar traits as a result of having to adapt to similar environments or ecological niches In The Runes of Evolution he illustrates how the ubiquity of convergence hints at an underlying framework whereby many outcomes not least brains and intelligence are virtually guaranteed on any Earth like planet Conway Morris also emphasizes how much of the complexity of advanced biological systems is inherent in microbial forms By casting a wider net The Runes of Evolution explores many neglected evolutionary questions Some are remarkably general Why for example are convergences such as parasitism carnivory and nitrogen fixation in plants concentrated in particular taxonomic hot spots Why do certain groups have a particular propensity to evolve toward particular states Some questions lead to unexpected evolutionary insights If bees sleep as they do do they dream Why is that insect copulating with an orchid Why have sponges evolved a system of fiber optics What do mantis shrimps and submarines have in common If dinosaurs had not gone extinct what would have happened next Will a saber toothed cat ever re evolve Cona Morris observes Even amongst the mammals let alone the entire tree of life humans represent one minute twig of a vast and largely fossilized arborescence Every living species is a linear descendant of an immense string of now vanished ancestors but evolution itself is the very reverse of linear Rather it is endlessly exploratory probing the vast spaces of biological hyperspace Indeed this book is a celebration of how our world is and was populated by a riot of forms a coruscating tapestry of life The Runes of Evolution is the most definitive synthesis of evolutionary convergence to be published to date

Role of Lipids in Virus Assembly Jamil S. Saad, Delphine M. Muriaux, 2015-07-28

RNA enveloped viruses comprise several families belonging to plus and minus strand RNA viruses such as retroviruses flavoviruses and orthomyxoviruses Viruses utilize cellular lipids during critical steps of replication like entry assembly and egress Growing evidence indicate important roles for lipids and lipid nanodomains in virus assembly This special topic covers key aspects of virus membrane interactions during assembly and egress especially those of retroviruses and Ebola virus EBOV Virus assembly and release involve specific and nonspecific interactions between viral proteins and membrane compartments Retroviral Gag proteins assemble predominantly on the PM Despite the great progress in identifying the factors that modulate retroviral Gag assembly on the PM there are still gaps in our understanding of precise mechanisms of Gag membrane interactions Studies over the last two decades have focused on the mechanisms by which other retroviral Gag proteins interact with membranes during assembly These include human immunodeficiency virus HIV Rous sarcoma virus RSV equine infectious anemia virus EIAV Mason Pfizer monkey virus M PMV murine leukemia virus MLV and human T lymphotropic virus type HTLV 1 Additionally assembly of filoviruses such as EBOV also occurs on the inner leaflet of the PM The articles published under this special topic highlight the latest understanding of the role of membrane lipids during virus assembly egress and release
