Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers

demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research *Social Cognition, Motivation, and Interaction: How Do People Respond to Threats in Social Interactions?* Eva Jonas, Christina Mühlberger, 2018-01-12 If we want to understand people's responses to threats in social interactions we can distinguish between three levels of analysis On a social level of analysis we can describe people's interpersonal behavior on a cognitive level we can identify corresponding information processing mechanisms and on a neural level we can specify neural systems which underlie these processes In this Research Topic we want to present research connecting these three levels of analysis and propose their functional interconnection in social interaction We propose that threats in social interactions activate basic motivational processes which manifest in neural processes related to behavioral inhibition vs activation in a social situation This shapes our attention to new information and affects our cognitions about social identities belief systems and worldviews These changes in social cognition in turn affect people's behavior in social interactions and lead to corresponding reactions on behalf of the interaction partner Thus we assume that people's reactions to threat in interactions can be described as sequences of broader attentional processes resulting from basic motivational tendencies leading to specific social cognitions and subsequent behavior within social interactions We can analyze this sequence in order to contribute to a better understanding of social interactions The three levels of analyses social cognitive neural shed light on social interactions from different angles On the social level we can analyze how the behaviors of the interaction partners mutually affect each other and how this is accompanied by specific cognitive emotional and motivational processes On the cognitive level we can analyze people's perception of a social situation leading to attentional and reasoning processes with regard to their interaction partner's which may be accompanied by certain emotional and motivational processes and determines the behavior towards the partner's Finally we can focus on the neural mechanisms underlying cognitive emotional and motivational processes in social interactions Managing the New Tools in K-12 Teaching and Learning Jerome A. Schulz, 2018-02-02 *Managing the New Tools in K 12 Teaching and Learning* How Technology Can Enable School Improvement is about how to manage technology for learning at the district and school levels It provides an overview of the components of learning technology these include student devices networking software productivity toolkits electronic curricula and resources and data system infrastructure And it discusses how we can manage our technology efforts more effectively to help our students attain the benefits of this technology The book concludes with case studies of how this is being done at pioneering districts We are now at a tipping point in implementing learning technology on a larger scale This is happening very quickly Historically learning technology was driven by a strategy of technology integration where we called on individual teachers to each determine how to use technology in their classes and make changes in their own ways of working But to successfully implement technology on the scale we need requires top down as well as bottom up efforts *Managing the New Tools in K 12 Teaching and Learning* focuses on how districts and

schools can now use technology to bring about the big improvements in learning we are all striving for

Life by Algorithms Catherine Besteman, Hugh Gusterson, 2019-05-23 Essays on the downsides dysfunctions and dangers of automated decision making An excellent survey of the algorithmically managed life Choice The phone systems that businesses use to screen calls The link between student standardized test scores and public schools access to resources The algorithms that regulate patient diagnoses and reimbursements to doctors The impenetrable corporate bureaucracy that can drive customers in need of help up the wall or drive them to suicide The storage sorting and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level Meanwhile computers have offered a model of cognition that increasingly shapes our approach to the world The proliferation of robo-processes is the result as editors Catherine Besteman and Hugh Gusterson observe in this rich and wide ranging volume which features contributions from a distinguished cast of scholars in anthropology communications international studies and political science Though automatic processes are designed to be engines of rational systems the stories in *Life by Algorithms* reveal how they can in fact produce absurd inflexible or even dangerous outcomes Joining the call for algorithmic transparency the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance medicine education housing the workplace food production public space and emotions not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society The Machine Stops E M Forster's 1909 science fiction story tells the tale of a human society collapsing when the technology upon which it has become dependent fails Think of this volume as *The Machine Starts* a collection of unsettling ethnographic accounts of the rise of algorithmic governance A necessary and sobering call to arms Stefan Helmreich Massachusetts Institute of Technology Contributors include Catherine Besteman Alex Blanchette Robert W Gehl Hugh Gusterson Catherine Lutz Ann Lutz Fernandez Joseph Masco Sally Engle Merry Keesha M Middlemass Noelle Stout Susan J Terrio

Self-Concept, Motivation and Identity Frédéric Guay, Herbert Marsh, Dennis M. McInerney, Rhonda G. Craven, 2015-06-01 The concept of the Self has a long history that dates back from the ancient Greeks such as Aristotle to more contemporary thinkers such as Wundt James Mead Cooley Freud Rogers and Erikson Tesser Felson 2000 Research on the Self relates to a range of phenomena including self esteem self concept self protection self verification self awareness identity self efficacy self determination etc that could be sharply different or very similar Despite this long tradition of thinkers and the numerous studies conducted on the Self this concept is still not very well defined More precisely it is not a precise object of study but rather a collection of loosely related subtopics Baumesiter 1998 Also in the philosophical literature the legitimacy of the concept of self has been brought into question Some authors have argued that the self is not a psychological entity per se but rather an illusion created by the complex interplay between cognitive and neurological subsystems Zahavi 2005 Although no definitive consensus has been reached regarding the Self we emphasize in this volume that the Self and its related phenomena

including self concept motivation and identity are crucial for understanding consciousness and therefore important to understand human behavior Self concept motivation and identity Underpinning success with research and practice provides thus a unique insight into self concept and its relationship to motivation and identity from varied theoretical and empirical perspectives This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence demonstrating the importance of theory and research to effective practice

Abstract Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts
