Functional safety of machine controls Hauke, M., Schaefer, M., Apfeld, R., Bömer, T., Huelke, M., Borowski, T., Büllsach, K.-H., Dorra, M., Foermer-Schaefer, H.G., Uppenkamp, J., Lohmaier, O., Heimann, K.-D., Köhler, B., Zilligen, H., Otto, S., Rempel, P., Reuß, G., 2019-08-20. The EN ISO 13849-1 standard: Safety of machinery. Safety-related parts of control systems. Contains provisions governing the design of such parts. This report is an update of BGIA Report 2: 2008e of the same name. It describes the essential subject matter of the standard in its third revised 2015 edition and explains its application with reference to numerous examples from the fields of electromechanics, fluidics, electronics, and programmable electronics, including control systems employing mixed technologies. The standard is placed in its context of the essential safety requirements of the Machinery Directive, and possible methods for risk assessment are presented. Based upon this information, the report can be used to select the required Performance Level (PLr) for safety functions in control systems. The Performance Level (PL) which is actually attained is explained in detail. The requirements for attainment of the relevant Performance Level and its associated Categories, component reliability levels, diagnostic coverage, software safety, and measures for the prevention of systematic and common cause failures are all discussed comprehensively. Background information is also provided on implementation of the requirements in real case control systems. Numerous example circuits show down to component level how Performance

Levels a to e can be engineered in the selected technologies with Categories B to 4 The examples provide information on the safety principles employed and on components with well tried safety functionality Numerous literature references permit closer study of the examples provided The report shows how the requirements of EN ISO 13849 1 can be implemented in engineering practice and thus makes a contribution to consistent application and interpretation of the standard at national and international level

Microprocessor-Based Control Systems N.K. Sinha,2012-12-06 Recent advances in LSI technology and the consequent availability of inexpensive but powerful microprocessors have already affected the process control industry in a significant manner Microprocessors are being increasingly utilized for improving the performance of control systems and making them more sophisticated as well as reliable Many concepts of adaptive and learning control theory which were considered impractical only 20 years ago are now being implemented With these developments there has been a steady growth in hardware and software tools to support the microprocessor in its complex tasks With the current trend of using several microprocessors for performing the complex tasks in a modern control system a great deal of emphasis is being given to the topic of the transfer and sharing of information between them Thus the subject of local area networking in the industrial environment has become assumed great importance The object of this book is to present both hardware and software concepts that are important in the development of microprocessor based control systems An attempt has been made to obtain a balance between theory and practice with emphasis on practical applications It should be useful for both practicing engineers and students who are interested in learning the practical details of the implementation of microprocessor based control systems As some of the related material has been published in the earlier volumes of this series duplication has been avoided as far as possible
