

Emergency service (fire service)

Problem Statement & Student Guide

Version 4: 7th January 2016

Scenario description

Turing Hill Fire and Rescue Service (THFRS) is responsible for the Turing Hill Metropolitan County, a large urban conurbation in the North of England. It has always sought to exploit technology, both to improve efficiency and to improve safety for its officers.

Information about commercial properties which can be used to establish safety and fire risks (Site Specific Risk Information) is collected from a variety of sources, including surveys by fire officers, fire measures in place, construction and CAD drawings of premises. This information is critical to establish the risks should a fire occur at the premises, and is held at the THFRS Data Centre. It is clearly vital that such information is not out of date.

Each fire appliance carries a Mobile Data Terminal (MDT) which provides (offline) access to the key risk information and standard operating procedures for the fire type. The MDT is synchronised with the THFRS Data Centre while the appliance is in its base fire station.

Senior officers take charge of larger incidents, and there is a requirement for them to have access to this risk critical information at the scene of incidents together with access to standard operating procedures. This information was carried in paper form in an officer's car. This manual system made it difficult to ensure information was current and the volume of material carried also posed difficulties for rapid access.

A new system is to be introduced, where senior officers have mobile devices, connected by a 4G mobile phone network to provide real-time access to data held on THFRS network via Microsoft SharePoint. This enables officers to be fully informed of necessary information whilst they are managing the incident and ensures information is up-to-date. After consultation with business users, the mobile device selected was the Apple iPad, though this was not the preference of the ICT department.

Learning Outcomes

On successful completion of the scenario, students will be able to:

1. Articulate the major security risks and legal compliance issues for a Fire and Rescue Service.
2. Identify and justify technical controls for securing remote access and data governance.
3. Explain the key features of ISO27001 and risk assessment
4. Explain key features and requirements for an Information Security culture and suggest activities for developing it.
5. Identify and outline key policies required and HR processes.
