

Sequences

A sequence is a list of numbers that follow a certain rule.

Arithmetic Sequences

In an Arithmetic Sequence the difference between one term and the next is a constant.

$$a, a + d, a + 2d, a + 3d, \dots$$

Example: 1, 5, 9, 13, 17, ...

The n^{th} term, $a_n = a + (n - 1)d$

Geometric Sequences

In a Geometric Sequence each term is found by multiplying the previous term by a constant.

$$a, ar, ar^2, ar^3, \dots$$

Example: 2, 6, 18, 54, 162, ...

The n^{th} term, $a_n = ar^{n-1}$

Fibonacci Sequence

In a Fibonacci sequence each term is found by adding the two numbers before it.

$$x_n = x_{n-1} + x_{n-2}$$

0, 1, 1, 2, 3, 5, 8, 13, 21,

Introduction to Analysis Corey M. Dunn, 2017-06-26 *Introduction to Analysis* is an ideal text for a one semester course on analysis. The book covers standard material on the real numbers, sequences, continuity, differentiation, and series, and includes an introduction to proof. The author has endeavored to write this book entirely from the student's perspective; there is enough rigor to challenge even the best students in the class, but also enough explanation and detail to meet the needs of a struggling student. From the Author to the student, I vividly recall sitting in an Analysis class and asking myself, "What is all of this for or I don't have any idea what's going on." This book is designed to help the student who finds themselves asking the same sorts of questions, but will also challenge the brightest students. Chapter 1 is a basic introduction to logic and proofs. Informal summaries of the idea of proof are provided before each result and before a solution to a practice problem. Every chapter begins with a short summary followed by a brief abstract of each section. Each section ends with a concise and referenced summary of the material, which is designed to give the student a big picture idea of each section. There is a brief and non-technical summary of the goals of a proof or solution for each of the results and practice problems in this book, which are clearly marked as "Idea of proof" or as "Methodology," followed by a clearly marked formal proof or solution. Many references to previous definitions and results are included. A Troubleshooting Guide appears at the end of each chapter that answers common questions.

Principles and Practice of Constraint Programming - CP 2006 Frédéric Benhamou, 2006-09-29 This book constitutes the refereed proceedings of the 12th International Conference on Principles and Practice of Constraint Programming, CP 2006, held in Nantes, France, in September 2006. The 42 revised full papers and 21 revised short papers presented together with extended abstracts of four invited talks were carefully reviewed and selected from 142 submissions. All current issues of computing with constraints are addressed.

Applied Simulation and Optimization Miguel Mujica Mota, Idalia Flores De La Mota, Daniel Guimarans Serrano, 2015-04-06 Presenting techniques, case studies, and methodologies that combine the use of simulation approaches with optimization techniques for facing problems in manufacturing, logistics, or aeronautical problems, this book provides solutions to common industrial problems in several fields, which range from manufacturing to aviation problems where the common denominator is the combination of simulation's flexibility with optimization techniques. Providing readers with a comprehensive guide to tackle similar issues in industrial environments, this text explores novel ways to face industrial problems through hybrid approaches: simulation optimization that benefits from the advantages of both paradigms in order to give solutions to important problems in service industry production processes or supply chains, such as scheduling, routing problems, and resource allocations, among others.

Constraint programming continues to be an exciting ourishing and growing research field

As the annual CP conference proceedings amply witness This year from 158 submissions we chose 46 to be published in full in the proceedings Instead of selecting one overall best paper we picked out four distinguished papers though we were tempted to select at least 12 such papers In addition we included 16 short papers in the proceedings these were presented as posters at CP 2004 This volume includes summaries of the four invited talks of CP 2004 Two speakers from industry were invited However these were no ordinary industrial representatives but two of the leading researchers in the CP community Helmut Simonis of Parc Technologies until its recent takeover by Cisco Systems and Jean Francois Puget Director of Optimization Technology at ILOG The other two invited speakers are also big movers and shakers in the research community
