Introduction to Communication Systems Elmustafa Sayed Ali Ahmed, Eng Elmustafa Sayed Ali Ahmed M Sc, 2015-07-27 Communication system is a system model describes a communication exchanges between two stations transmitter and receiver Signals or information s passes from source to distention through what is called channel which represents a way that signal use it to move from source toward destination To transmit signals in communication system it must be first processed by several stages beginning from signal representation to signal shaping until encoding and modulation After preparing the transmitted signal it passed to the transmission line of channel and due signal crossing this media it faces many impairments such noise attenuation and distortion This note book gives a brief concepts about transmission line calculation and also provides an idea about communication system impairments with an example for each one The note book also provides an introduction to data communication with a simple ideas of data processing

An Introduction to Communication Theory and Systems John B. Thomas, 2012-12-06 This book was written as a first treatment of statistical communication theory and communication systems at a senior graduate level The only formal prerequisite is a knowledge of elementary calculus however some familiarity with linear systems and transform theory will be helpful Chapter 1 is introductory and contains no substantial technical material Chapter 2 is an elementary introduction to probability theory at a nonrigorous and non abstract level It is essential to the remainder of the book but may be skipped or reviewed hastily by any student who has taken a one semester undergraduate course in probability Chapter 3 is a brief treatment of random processes and spectral analysis It includes an introduction to shot noise Sections 3.14-3.17 which is not subsequently used explicitly Chapter 4 considers linear systems with random inputs It includes a considerable amount of material on narrow band systems and on the representation of random processes Chapter 5 treats the matched filter and the linear least mean squared error filter at an elementary level but in some detail Numerous examples are provided throughout the book Many of these are of an elementary nature and are intended merely to illustrate textual material A reasonable number of problems of varying difficulty are provided Instructors who adopt the text for classroom use may obtain a Solutions Manual for most of the problems by writing to the author

Introduction to Communication Science and Systems John R. Pierce, Edward C. Posner, 2013-06-29 There are many valuable and useful books on electrical communication References 1-5 are some examples but they have certain disadvantages for the beginner The more advanced books present some things in a basic way but they are very narrow for an introduction to communication The introductory books are broader but still narrow by our standards Further they often pick things out of thin air rather than derive them This book is aimed at giving the beginner a basic understanding of a wide range of topics which are essential in communication systems These include antennas and transmission thermal noise and its consequences Fourier transforms modulation and noise sampling and pulse code modulation autocorrelation and power spectrum optimum filtering gaussian noise and errors in digital transmission data transmission limits on data rate including information theory and quantum limits and source encoding We have not included communications traffic switching and multiplexing nor protocols for digital and computer communications For these Reference 6 is excellent In general our book does not discuss the circuits used for communication or the physics of radio propagation We assume that these will be taught in specialized courses but such courses are not prerequisites for this one Chapter 1 introduces the transmission formula or antenna equation and antenna directivity Only a very basic sophomore physics knowledge of electromagnetic theory is assumed The radar equation is also treated
