The American Nonvoter Lyn Ragsdale, Jerrold G. Rusk, 2017-04-24 A diverse body of research exists to explain why eligible voters don't go to the polls on election day Theories span from the psychological nonvoters have limited emotional engagement with politics and therefore lack motivation to the social politics is inherently social and nonvoters have limited networks and the personal nonvoters tend to be young less educated poor and highly mobile Other scholars suggest that people don't vote because campaigns are uninspiring This book poses a new theory uncertainty about the national context at the time of the election During times of national crisis when uncertainty is high citizens are motivated to sort through information about each candidate to figure out which would best mitigate their uncertainty When external uncertainty is low however citizens spend less time learning about candidates and are equally unmotivated to vote The American Nonvoter examines how uncertainty regarding changing economic conditions dramatic national events and U S international interventions influences people's decisions whether to vote or not Using rigorous statistical tools and rich historical stories Lyn Ragsdale and Jerrold G Rusk test this theory on aggregate nonvoting patterns in the United States across presidential and midterm elections from 1920 to 2012 The authors also challenge the stereotype of nonvoters as poor uneducated and apathetic Instead the book shows that nonvoters are by and large as politically knowledgeable as voters but see no difference between candidates or view them negatively

Rescuing Econometrics

Duo Qin,2023-12-01 Haavelmo's 1944 monograph *The Probability Approach in Econometrics* is widely acclaimed as the manifesto of econometrics. This book challenges Haavelmo's probability approach, showing how its use is delivering defective and inefficient results and argues for a paradigm shift in econometrics towards a full embrace of machine learning with its attendant benefits. Machine learning has only come into existence over recent decades, whereas the universally accepted and current form of econometrics has developed over the past century. A comparison between the two is however striking. The practical achievements of machine learning significantly outshine those of econometrics, confirming the presence of widespread inefficiencies in current econometric research. The relative efficiency of machine learning is based on its theoretical foundation and particularly on the notion of Probably Approximately Correct (PAC) learning. Careful examination reveals that PAC learning theory delivers the goals of applied economic modelling research far better than Haavelmo's probability approach. Econometrics should therefore renounce its outdated foundation and rebuild itself upon PAC learning theory so as to unleash its pent-up research potential. The book is catered for applied economists, econometricians, economists specialising in the history and methodology of economics, advanced students, philosophers of social sciences.

Matrix-Based Introduction to Multivariate Data Analysis Kohei Adachi,2020-05-20 This is the first textbook that allows readers who may be unfamiliar with matrices to understand a variety of multivariate analysis procedures in matrix forms. By explaining which models underlie particular procedures and what objective function is optimized to fit the model to the data, it enables readers to rapidly comprehend multivariate data analysis. Arranged so that readers can intuitively grasp the purposes for which multivariate analysis procedures are used, the book also offers clear explanations of those purposes with numerical examples preceding the mathematical descriptions. Supporting the modern matrix formulations by highlighting singular value decomposition among theorems in matrix algebra, this book is useful for undergraduate students who have already learned introductory statistics as well as for graduate students and researchers who are not familiar with matrix-intensive formulations of multivariate data analysis. The book begins by explaining fundamental matrix operations and the matrix expressions of elementary statistics. Then it offers an introduction to popular multivariate procedures, with each chapter featuring increasing advanced levels of matrix algebra. Further, the book includes six chapters on advanced procedures covering advanced matrix operations and recently proposed multivariate procedures such as sparse estimation, together with a clear explication of the differences between principal components and factor analyses solutions. In a nutshell, this book allows readers to gain an understanding of the latest developments in multivariate data science. **PropTech and**

Subject Guide to Books in Print, 1997 *Pathogen Transmission at the Domestic-Wildlife Interface: A Growing Challenge that Requires Integrated Solutions* Saúl Jiménez-Ruiz, Nuno Santos, Ferran Jori, Jose Angel Barasona, Amanda Elizabeth Fine, 2024-05-28 Over thousands of years wildlife has coexisted with domestic animals in dynamic systems The domestic wildlife interfaces are those physical spaces where wild and domestic species overlap and potentially interact through direct and indirect contact with the inherent risk of pathogen transmission The nature of this interface is complex and can significantly vary over time and across landscapes throughout the world Over the last centuries processes such as human intervention on agriculture and animal husbandry industrialization or globalization have altered ecosystems These

changes often lead to more interconnected interfaces and increased opportunities for the emergence and spread of pathogens because the human population is increasing and expanding livestock production is therefore increasing to supply the growing food demand and wildlife often under the pressure of habitat reduction is becoming more exposed to these new interfaces The British National Bibliography Arthur James Wells,2005 American Book Publishing Record ,2006
