Catalogue of Princeton University Princeton University, 1921      A Curious Catalogue of Princeton University Frank D. Halsey, 1924      **Just Princeton** Princeton University. Graduate Council, 1922      Function Classes on the Unit Disc Miroslav Pavlović, 2013-12-12 This monograph contains a study on various function classes a number of new results and new or easy proofs of old results Fefferman Stein theorem on subharmonic behavior theorems on conjugate functions and fractional integration on Bergman spaces Fefferman's duality theorem which are interesting for specialists applications of the Hardy Littlewood inequalities on Taylor coefficients to  $C$  maximal theorems and  $C$  convergence a study of BMOA due to Knese based only on Green's formula the problem of membership of singular inner functions in Besov and Hardy Sobolev spaces a full discussion of  $g$  function all  $p > 0$  and Calderón's area theorem a new proof due to Astala and Koskela of the Littlewood Paley inequality for univalent functions and new results and proofs on Lipschitz spaces coefficient multipliers and duality including compact multipliers and multipliers on spaces with non normal weights It also contains a discussion of analytic functions and lacunary series with values in quasi Banach spaces with applications to function spaces and composition operators Sixteen open questions are posed The reader is assumed to have a good foundation in Lebesgue integration complex analysis functional analysis and Fourier series Further information can be found at the author's website at <http://poincare.matf.bg.ac.rs/pavlovic>      **Princeton's War Program** Princeton University, 1928      **Introduction to Cyclotomic Fields** Lawrence C.

Washington, 2012-12-06 Introduction to Cyclotomic Fields is a carefully written exposition of a central area of number theory that can be used as a second course in algebraic number theory Starting at an elementary level the volume covers  $p$ -adic  $L$  functions class numbers cyclotomic units Fermat's Last Theorem and Iwasawa's theory of  $\mathbb{Z}_p$  extensions leading the reader to an understanding of modern research literature Many exercises are included The second edition includes a new chapter on the work of Thaine Kolyvagin and Rubin including a proof of the Main Conjecture There is also a chapter giving other recent developments including primality testing via Jacobi sums and Sinnott's proof of the vanishing of Iwasawa's  $f$  invariant

**Algebraic Groups and Number Theory** Vladimir Platonov, Andrei Rapinchuk, Rachel Rowen, 1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview of almost all of the major results of the arithmetic theory of algebraic groups obtained to date      Congruences for L-Functions J. Urbanowicz, Kenneth S. Williams, 2013-03-09 In Hardy and Williams 1986 the authors exploited a very simple idea to obtain a linear congruence involving class numbers of imaginary quadratic fields modulo a certain power of 2 Their congruence provided a unified setting for many congruences proved previously by other authors using various means The Hardy Williams idea was as follows Let  $d$  be the discriminant of

a quadratic field Suppose that  $d$  is odd and let  $d = 2^k \prod p_i^{e_i}$  be its unique decomposition into prime discriminants Then for any positive integer  $k$  coprime with  $d$  the congruence holds trivially as each Legendre Jacobi Kronecker symbol has the value 1 or -1 Expanding this product gives  $\sum_{e|d} \chi(e) \equiv 1 \pmod{4}$  where  $e$  runs through the positive and negative divisors of  $d$  and  $\chi(e)$  denotes the number of distinct prime factors of  $e$  Summing this congruence for  $\chi$

Stein Manifolds and Holomorphic Mappings Franc Forstnerič, 2011-08-27 The main theme of this book is the homotopy principle for holomorphic mappings from Stein manifolds to the newly introduced class of Oka manifolds The book contains the first complete account of Oka Grauert theory and its modern extensions initiated by Mikhail Gromov and developed in the last decade by the author and his collaborators Included is the first systematic presentation of the theory of holomorphic automorphisms of complex Euclidean spaces a survey on Stein neighborhoods connections between the geometry of Stein surfaces and Seiberg Witten theory and a wide variety of applications ranging from classical to contemporary
