

The background of the slide is a 3D rendering of a white, torn paper surface. The paper is layered, with some pieces floating in the air and others resting on a red, jagged, torn surface at the bottom. On the white paper, there are several small, dark rectangular objects that look like pieces of paper or small books. One of these objects is on a small, circular, light-colored base that has the word "SOURCE" written on it in a circular pattern. The overall aesthetic is clean and modern, with a focus on the text and the layered paper effect.

MATLAB for Engineers, Global Edition Holly Moore, 2025-06-07 MATLAB For Engineers starts at the beginning to introduce first year engineering students to MATLAB Starting with basic algebra you'll learn how MATLAB can be used to solve a wide range of engineering problems Examples taken from concepts presented in early chemistry physics and first and second year engineering classes are included When the text covers new subjects like statistics and matrix algebra brief background information is used to support your success As you work through hands on examples and exercises you'll learn to apply a consistent problem solving methodology to help you reach a solution The 6th Edition reflects the MATLAB software release R2021B Updated screenshots new data new problems and discussions offer a current view of the coding language and platform you'll use in your classes and career **Matlab® for Engineers** Holly Moore, 2023 This book grew out of my experience teaching MATLAB and other computing languages to freshmen engineering students at Salt Lake Community College I was frustrated by the lack of a text that started at the beginning Although there were many comprehensive reference books they assumed a level of both mathematical and computer sophistication that my students did not possess Also because MATLAB was originally adopted by practitioners in the fields of signal processing and electrical engineering most of these texts provided examples primarily from those areas an approach that didn't fit with a general engineering curriculum This text starts with basic algebra and shows how MATLAB can be used to solve engineering problems from a

wide range of disciplines The examples are drawn from concepts introduced in early chemistry and physics classes and freshman and sophomore engineering classes A standard problem solving methodology is used consistently The text assumes that the student has a basic understanding of college algebra and has been introduced to trigonometric concepts students who are mathematically more advanced generally progress through the material more rapidly Although the text is not intended to teach subjects such as statistics or matrix algebra when the MATLAB techniques related to these subjects are introduced a brief background is included In addition sections describing MATLAB techniques for solving problems by means of calculus and differential equations are introduced near the end of appropriate chapters These sections can be assigned for additional study to students with a more advanced mathematics background or they may be useful as reference material as students progress through an engineering curriculum
