

Review of Systems (ROS)

Every once in a while we all need refresher on things we have been doing forever. A lot of time we go along thinking "I got this down; I don't need to check myself all the time."

Well sometimes we do.

So I thought I would take this opportunity to review what goes into a Review of Systems (ROS).

REVIEW OF SYSTEMS (ROS)

A ROS is an inventory of body systems obtained through a series of questions seeking to identify signs and/or symptoms which the patient may be experiencing or has experienced.

For purposes of ROS, the following systems are recognized and some examples are given:

- | | |
|--|--|
| » Constitutional symptoms (e.g., fever, weight loss) | » Genitourinary |
| » Eyes | » Musculoskeletal – joint issues |
| » Ears, Nose, Mouth, Throat | » Integumentary (skin and/or breast) – rashes or itching |
| » Cardiovascular | » Neurological |
| » Respiratory – cough or breathing problems | » Psychiatric |
| » Gastrointestinal – stomach upset or diarrhea | » Endocrine |
| | » Hematology/Lymphatic |
| | » Allergy/Immunologic |

A **problem pertinent ROS** inquires about the system directly related to the problem(s) identified in the HPI.

Documentation guidelines: The patient's positive responses and pertinent negatives for the system related to the problem should be documented.

An **extended ROS** inquires about the system directly related to the problem(s) identified in the HPI and a limited number of additional systems.

Documentation guidelines: The patient's positive responses and pertinent negatives for two to nine systems should be documented.

* Example here does **NOT** document subdomains for evaluation & management services (e.g., T)

A **complete ROS** inquires about the system(s) directly related to the problem(s) identified in the HPI plus all additional body systems.
Documentation guidelines: At least ten organ systems must be reviewed. Those systems with positive or pertinent negative responses must be individually documented. For the remaining systems, a notation indicating all other systems are negative is permissible. In the absence of such a notation, at least ten systems must be individually documented.*

Please note that CMS requires an "all other systems were reviewed and found to be negative" statement if indeed all other systems were reviewed and found to be negative and all the pertinent positives and negatives are listed.

The following is a list of unacceptable ROS statements:

- » "Otherwise negative" if there is no statement about all systems reviewed
- » "Negative"
- » "Negative per Green Sheet"

It may seem easier to use the caveat and state that the patient is unable to cooperate in a ROS. But if it is clear from the documentation that there is a caregiver or family member present this is not appropriate. In these cases you should make your best effort to obtain a ROS from the family or caregiver. If you are still unable to obtain an ROS you just state why the ROS was unobtainable.

Please remember if you referred to the HPI when you intend to have a full ROS to make sure it is actually there. If it is not present the chart will be downgraded.

This is an important part of documentation and if it is not done correctly it could mean the difference between a level 5 and a level 3 in some instances.

Coming next month we will review the HPI and History.

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system about these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e.g. should rating averages come with error bars How should the evaluative information

about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point *Wiley CPAexcel Exam Review 2015 Study Guide July* O.
