Guide to Biometrics Ruud M. Bolle, Jonathan H. Connell, Sharath Pankanti, Nalini K. Ratha, Andrew W. Senior, 2013-06-29 Starting with fingerprints more than a hundred years ago there has been ongoing research in biometrics Within the last forty years face and speaker recognition have emerged as research topics However as recently as a decade ago biometrics itself did not exist as an independent field Each of the biometric related topics grew out of different disciplines For example the study of fingerprints came from forensics and pattern recognition speaker recognition evolved from signal processing the beginnings of face recognition were in computer vision and privacy concerns arose from the public policy arena One of the challenges of any new field is to state what the core ideas are that define the field in order to provide a research agenda for the field and identify key research problems Biometrics has been grappling with this challenge since the late 1990s With the maturation of biometrics the separate biometrics areas are coalescing into the new discipline of biometrics The establishment of biometrics as a recognized field of inquiry allows the research community to identify problems that are common to biometrics in general It is this identification of common problems that will define biometrics as a field and allow for broad advancement Fundamentals of Verbal and Nonverbal Communication and the Biometric Issue Anna Esposito, NATO Programme for Security through Science, 2007 The main theme of this publication is the fundamental features of verbal and nonverbal communication and their relationships with the identification of a person his her socio cultural background and personal traits The problem of understanding human behaviour in terms of personal traits and the possibility of an algorithmic implementation that exploits personal traits to identify a person unambiguously are among the great challenges of modern science and technology On the one hand there is the theoretical question of what makes each individual unique among all others that share similar traits and what makes a culture unique among various cultures On the other hand there is the technological need to be able to protect people from individual disturbance and dangerous behaviour that could damage an entire community interesting research areas is that related to human interaction and face to face communication It is in this context that knowledge is shared and personal traits acquire their significance **Multimedia Data Mining and Analytics** Aaron K. Baughman, Jiang Gao, Jia-Yu Pan, Valery A. Petrushin, 2015-03-31 This book provides fresh insights into the cutting edge of multimedia data mining reflecting how the research focus has shifted towards networked social communities mobile devices and sensors The work describes how the history of multimedia data processing can be viewed as a sequence of disruptive innovations Across the chapters the discussion covers the practical frameworks libraries and open source software that enable the development of ground breaking research into practical applications Features reviews how innovations in mobile social cognitive cloud and organic based computing impacts upon the development of multimedia data mining provides practical details on implementing the technology for solving real world problems includes chapters devoted to privacy issues in multimedia social environments and large scale biometric data

processing covers content and concept based multimedia search and advanced algorithms for multimedia data representation processing and visualization Innovative Automatic Identification and Location-Based Services: From Bar Codes to Chip Implants Michael, Katina, Michael, M.G., 2009-03-31 This book emphasizes the convergence and trajectory of automatic identification and location based services toward chip implants and real time positioning capabilities Provided by publisher Advances in Biometric Person Authentication S. Z. Li, 2004-11-29 This book constitutes the refereed proceedings of the 5th Chinese Conference on Biometric Recognition SINOBOMETRICS 2004 held in Guanzhou China in December 2004 The 60 revised full papers presented together with 14 invited papers by internationally leading researchers were carefully reviewed and selected from 140 submissions The papers are organized in topical sections on biometrics best performing biometric engines face localization pose estimation face recognition 3D based methods subspace and discriminant analysis systems and applications fingerprint preprocessing and minutiae extraction fingerprint recognition and matching fingerprint classification iris recognition speaker recognition and other biometric primitives *Project E-Society: Building Bricks* Reima Suomi, Regis Cabral, J. Felix Hampe, Arto Heikkilä, Jonna Järveläinen, Eija Koskivaara, 2007-04-10 13E 2006 the 6th in this series of IFIP conferences marked the congregation of researchers and practitioners in the areas of e Commerce e Business and e Government The conference was sponsored by IFIP TC 6 in cooperation with TC 8 and TC 11 The conference provided a forum for researchers engineers and interested users in academia industry and government to discuss the latest research cutting edge practice and upcoming trends in the growing areas of e Commerce e Business and particularly e Government Sophisticated applications as well as the underlying technology that supports such applications were discussed and demonstrated The conference attracted a wide range of participants representing a significant community of researchers and practitioners from a broad range of countries The conference was organized along parallel tracks each track focusing on specific aspects of current research industry applications and public administration
