Schiffmann,Jun Fukushima,Nick

Serpone,2017-11-28 The principal aim of this book is to introduce chemists through a tutorial approach to the use of microwaves by examining several experiments of microwave chemistry and materials processing It will subsequently enable chemists to fashion their own experiments in microwave chemistry or materials processing Microwave heating has become a popular methodology in introducing thermal energy in chemical reactions and material processing in laboratory scale experiments Several research cases where microwave heating has been used in a wide range of fields have been reported including organic synthesis polymers nanomaterials biomaterials and ceramic sintering among others In most cases microwave equipment is used as a simple heat source Therefore the principal benefits of microwave radiation have seldom been taken advantage of One reason is the necessity to understand the nature of electromagnetism microwave engineering and thermodynamics However it is difficult for a chemist to appreciate these in a short time so they act as barriers for the

chemist who might take an interest in the use of microwave radiation This book helps to overcome these barriers by using figures and diagrams instead of equations as much as possible *2nd International Conference on Engineering Manufacture 2024* Lucas F. M. da Silva, Maria de Fátima Reis Vaz, Marion Merklein, Ricardo J. C. Carbas, 2024-09-21 This book gathers selected papers presented at the 2nd International Conference on Engineering Manufacture held in Porto Portugal May 9 10 2024 The focus is on engineering manufacture and includes works on additive manufacturing heat treatment rolling joining and fatigue The book provides the state of the art of engineering manufacture and also serves as a reference volume for researchers and graduate students working in the field of technological processes **Advanced Materials Processing and Manufacturing** Yogesh Jaluria, 2018-05-24 This book focuses on advanced processing of new and emerging materials and advanced manufacturing systems based on thermal transport and fluid flow It examines recent areas of considerable growth in new and emerging manufacturing techniques and materials such as fiber optics manufacture of electronic components polymeric and composite materials alloys microscale components and new devices and applications The book includes analysis mathematical modeling numerical simulation and experimental study of processes for prediction design and optimization It discusses the link between the characteristics of the final product and the basic transport mechanisms and provides a foundation for the study of a wide range of manufacturing processes Focuses on new and advanced methods of manufacturing and materials processing with traditional methods described in light of the new approaches Maximizes reader understanding of the fundamentals of how materials change what transport processes are involved and how these can be simulated and optimized concepts not covered elsewhere Introduces new materials and applications in manufacturing and summarizes traditional processing methods such as heat treatment extrusion casting injection molding and bonding to show how they have evolved and how they could be used for meeting the challenges that we face today **Radiative Heat Transfer** Michael F.
