

## 23. Limiting Reactant and Excess Reactant

### Background

#### Limiting Reactant and Excess Reactant

In reactions where the reactants are not present in a stoichiometric ratio, the amount of product produced is determined by the amount of the reactant that is fully consumed in the reaction first. This reactant is called the limiting reactant (or limiting reagent). It is the amount of this reactant that is used to calculate the amount of product, just like a baked recipe can't be adjusted based on the amount of an ingredient that's in short supply.

#### Mass and Molar Ratios in Chemical Reactions

Reactions occur according to the number of atoms and molecules that are available to react in a precise ratio. The law of conservation of mass states that matter can be neither created nor destroyed. Therefore, the number of atoms of each element on the reactants side must be the same as the number of atoms of each element on the products side. This quantitative study of chemical reactions is called stoichiometry. The subscripts in a balanced reaction are related to each other by stoichiometric molar ratios. For example, nitrogen reacts with hydrogen to form ammonia in a 1:3 stoichiometric ratio in the balanced equation:

The molar ratios can be used in conversion factors to find the amount in moles of one substance given the amount of another.

Laboratory Manual for Principles of General Chemistry Jo Allan Beran, 2010-11-01 This new edition of the Beran lab manual emphasizes chemical principles as well as techniques The manual helps students understand the timing and situations for the various techniques The Beran lab manual has long been a market leading lab manual for general chemistry Each experiment is presented with concise objectives a comprehensive list of techniques and detailed lab intros and step by step procedures

**Laboratory Manual for Principles of General Chemistry** J. A. Beran, Mark Lassiter, 2022-08-16 Laboratory Manual for Principles of General Chemistry 11th Edition covers two semesters of a general chemistry laboratory program The material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and interpreting the data and minimizing inherent variables As a result of good data a scientific and analytical conclusion is made which may or may not be right but is certainly consistent with the data Experiments write textbooks textbooks don't write experiments A student's scientific literacy grows when experiences and observations associated with the scientific method are encountered Further experimentation provides additional cause effect observations leading to an even better understanding of the experiment The 11th edition's experiments are informative and challenging while offering a solid foundation for technique safety and experimental procedure The reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit An Additional Notes column is included in each experiment's Report Sheet to provide a space for recording observations and data during the experiment Continued emphasis on handling data is supported by the Data Analysis section

*Clean Energy: Hydrogen/fuel Cells Laboratory Manual* K S V Santhanam, Gerald A Takacs, Massoud J Miri, Alla V

Bailey, Thomas D Allston, Roman J Press, 2016-01-15 This manual is designed for the use of hydrogen as a fuel in the fuel cells The turn of the century has seen a realization of moving towards clean energy due to a variety of considerations ranging from

global warming anxiety to living in a healthy atmosphere depletion of fossil fuels oil slick in Gulf of Mexico resulting in disasters and so forth Innumerable debates in the literature has led to the identification of hydrogen as the safest and efficient fuel over the other available fuels This fuel can be used in two ways a direct combustion like gasoline and b fuel cells The use of it by the first method requires pure oxygen to be used for combustion it is an expensive method involving oxygen storage and transportation If oxygen is substituted by air in the combustion it produces nitrogen oxides that are defying the definition of clean energy The other method is to use it as a fuel cell for easy emission free transportation Here chemical energy is converted to electrical energy directly in a fuel cell To illustrate principles of related fuel cells methanol and borohydride fuel cells are included in this manual The nine experiments described here are designed for illustrating the concepts for the beginners and those motivated to go for clean energy DVD displays the actual experimental set up and measurement procedures for Hydrogen safety Fuel value measurement Gaseous properties of hydrogen Proton exchange membrane fuel cell assembly and Dissolved methanol fuel cell
