

### Dilute 1:100

Platelet counting area: count on all 25 squares inside the large center square (circled)

Perform platelet count using 1:100 dilution:

1. Count the platelets in the entire large center square (1 mm<sup>2</sup>):

Side 1 = 166      Side 2 = 170

2. Compute the average:

A.  $166 + 170 = 336$  platelets

B.  $336 \div 2 = 168$  average

3. Calculate the count:

$$\text{Platelets} = \frac{\text{Average \# platelets} \times \text{Dilution factor}}{\text{Area counted (mm}^2\text{)} \times D (0.1 \text{ mm})}$$

$$\text{Platelets} = \frac{168 \times 100}{1 \times 0.1} / \text{mm}^3 \text{ (or } \mu\text{L)}$$

$$\text{Platelets} = 168 \times 1000 / \mu\text{L}$$

$$\text{Platelets} = 168,000 \text{ (or } 1.68 \times 10^5\text{)} / \mu\text{L}$$

$$\text{Platelets} = 1.68 \times 10^{11} / \text{L}$$

## **Manual Platelet Calculation:**

*Platelets* Alan D. Michelson, 2011-08-29 *Platelets* Second Edition is the definitive current source of state of the art knowledge about platelets and covers the entire field of platelet biology pathophysiology and clinical medicine Recently there has been a rapid expansion of knowledge in both basic biology and the clinical approach to platelet related diseases including thrombosis and hemorrhage Novel platelet function tests drugs blood bank storage methods and gene therapies have been incorporated into patient care or are in development This book draws all this information into a single comprehensive and authoritative resource First edition won Best Book in Medical Science Award from the Association of American Publishers Contains fourteen new chapters on topics such as platelet genomics and proteomics inhibition of platelet function by the endothelium clinical tests of platelet function real time in vivo imaging of platelets and inherited thrombocytopenias A comprehensive full color reference comprising over 70 chapters 1400 pages and 16 000 references *Platelets and Megakaryocytes* Jonathan M. Gibbins, Martyn P. Mahaut-Smith, 2008-02-04 12 The average human body has in the order of 10 circulating platelets They are crucial for hemostasis and yet excessive platelet activation is a major cause of morbidity and mortality in western societies It is therefore not surprising that platelets have become one of the most extensively investigated biological cell types We are however far from understanding precisely how platelets become activated under physiological and pathophysiological conditions In addition there are large gaps in our knowledge of platelet production from their giant precursor cell the megakaryocyte Understanding megakaryocyte biology will be crucial for the development of platelet gene targeting The aim of *Platelets and Megakaryocytes* is therefore to bring together established and recently developed techniques to provide a comprehensive guide to the study of both the platelet and the megakaryocyte It consists of five sections split between two volumes The more functional assays appear in Volume 1 whereas Volume 2 includes signaling techniques postgenomic methods and a number of key perspectives chapters Part I of Volume 1 *Platelets and Megakaryocytes Functional Assays* describes many well established approaches to the study of platelet function including aggregometry secretion arachidonic acid metabolism procoagulant responses platelet adhesion under static or flow conditions flow cytometry and production of microparticles Although one would ideally wish to perform experiments with human platelets studies within the circulation using intravital microscopy require the use of animal models which are described in Chapter 16 vol 1 *Hematology* Bernadette F. Rodak, George A. Fritsma, Kathryn Doig, 2007-01-01 Textbook explores key aspects of hematology from normal hematopoiesis through diseases of erythroid myeloid lymphoid and megakaryocytic origin Includes a revised section on hemostasis and thrombosis Case studies and chapter summaries are included *Textbook Of Practical Physiology - 2Nd Edn.* G.
