

## About your radar

The major components of a typical BridgeMaster E Radar installation are as follows:

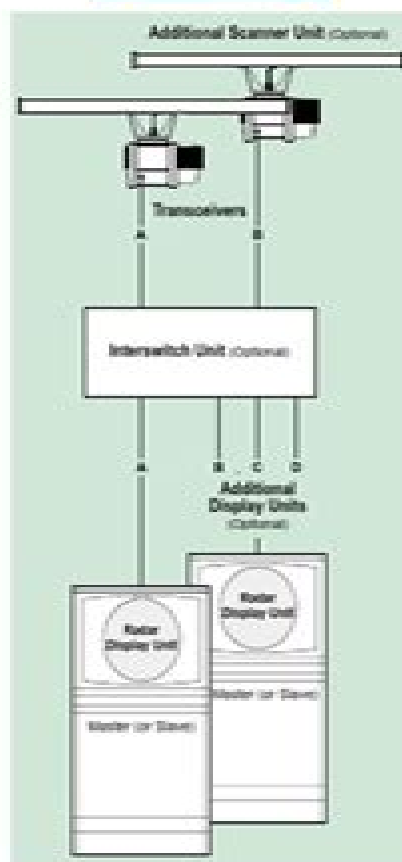

- Colour Display
- System/Trackerball, Memory Card Unit, Brillance Control (additional/Dedicated Control Panel optional, see front page of this card)
- Antenna Unit
- Antenna Tuning Unit (S-Band or X-Band)
- Transceiver Unit (Either Flushmount or Bulkhead mounted)
- Optional Performance Monitor (mounted on Tuning Unit)
- Plans Isolator Switch
- Scanner Control Unit for switching the scanner ON and OFF (in S-Band Systems ONLY)

The basic, single scanner/single display configuration can be expanded by the introduction of an Interswitch Unit and additional scanners and displays. The arrangement illustrated below caters for the simple addition of a second scanner and/or a second display, or for a multiple configuration of up to two scanners and four displays.

### Basic System

### Interswitched System

## Bridge Quick Reference

### Control panels

The radar Display Unit is always fitted with a **Simple Control Panel** (see diagram below). This panel contains a simple pointing device (a joystick or trackerball referred to as the cursor control) with two associated keys (left and right) which are used to control the radar and to display. A duplicate left key is available when a 2-card memory card unit is fitted at the left hand side of the panel, thus enabling two-handed operation. Memory cards are used for storing and retrieving information such as maps and ship track histories.

An optional **Dedicated Control Panel** may also be fitted. This dedicated panel contains individual controls for specific functions which would normally be accessed and adjusted using the cursor control and associated left/right keys of the Simple Control Panel (see diagram below).

### Getting started

If the radar is already operating in the **TRANSMIT** mode (i.e. the display looks similar to that depicted in the centre page(s) of this card), and the compass has been initialised, then the abbreviated operating instructions given in the centre page(s) can be used to operate the display.

However, if the radar is in **STANDBY** mode, as depicted in the diagram above, the following operations should be carried out to select TRANSMIT mode. **Note** - If a Scanner Control Unit is fitted, and it is set to OFF ensure that it is set to switch it ON (i.e. that it is not working on, or in the words of, 'the scanner').

1. If fitted, ensure that the Scanner Control Unit is switched ON (refer to Plate above).
2. Using the joystick/trackerball, position the screen cursor over the TRANSMIT left key (see diagram above).
3. Left click to select (press and release the left key associated with the joystick/trackerball).

**Note** - During installation, your radar will have been set up by an experienced commissioning engineer. In its present configuration, the configuration is remembered by the radar and is recalled each time it is switched ON. It is, therefore, recommended that any change of configuration, or any selection that will affect the correct operation or function of the radar (such as transceiver tuning, pulse length selection etc.) only be undertaken by a qualified operator using an appropriate publication like the User Guide or the Ship's Manual.
