Sánchez, Miguel Ortega, Alfonso Romero, 2012-11-06 Traditionally Lorentzian geometry has been used as a necessary tool to
understand general relativity as well as to explore new genuine geometric behaviors far from classical Riemannian
techniques Recent progress has attracted a renewed interest in this theory for many researchers long standing global open
problems have been solved outstanding Lorentzian spaces and groups have been classified new applications to mathematical
relativity and high energy physics have been found and further connections with other geometries have been developed
Samples of these fresh trends are presented in this volume based on contributions from the VI International Meeting on
Lorentzian Geometry held at the University of Granada Spain in September 2011 Topics such as geodesics maximal trapped
and constant mean curvature submanifolds classifications of manifolds with relevant symmetries relations between
Lorentzian and Finslerian geometries and applications to mathematical physics are included This book will be suitable for a

techniques related to their solution The focus of this volume is to describe modern advances in radiative transfer and light
scattering optics This book brings together the most recent studies on light radiative transfer in the terrestrial atmosphere
while also reviewing environmental polarimetry The book is divided into nine chapters the first four chapters review recent
advances in modern radiative transfer theory and provide detailed descriptions of radiative transfer codes e g DISORT and
