present world **Data Construction and Data Analysis for Survey Research** Raymond Kent, 2020-05-19 Based on the needs of business marketing and social science students this book provides an accessible and easy to follow guide to survey data analysis The book avoids the more usual statistics driven perspective Rather it provides an intuitive feel for handling survey data by emphasising that data analysis is more about understanding the research objectives what kinds of data have been collected how quantitative data were generated by the process of measurement how to create a data matrix and how to transform raw data before thinking about appropriate statistical calculations The author begins by considering what data are the different kinds of data that surveys generate and the tripartite format of all quantitative data The processes of measurement and the errors that may arise are carefully explained Coverage of the creation and analysis of a data matrix using SPSS is then provided The author then reviews what kinds of statistical procedure are required for what kinds of data and for what purposes The book concludes by giving a review of strategies for coping with all the kinds of practical problems that arise in survey research Reader friendly throughout Data Analysis A Guide to Market and Social Research provides numerous worked examples end of chapter questions and points for further discussion to help reinforce concepts learnt A data diskette containing the worked examples in SPSS is also provided in the back of the book Also available is a companion website with extra features to accompany the text please take a look by clicking below <http://www.palgrave.com/business/kent/index.asp> Essential First Steps to Data Analysis Carol S. Parke, 2013 The purpose of this book is to provide instruction and guidance on preparing quantitative data sets prior to answering a study's research questions Preparation may involve data management and manipulation tasks data organization structural changes to data files or conducting preliminary analysis such as examining the scale of a variable the validity of assumptions or the nature and extent of missing data The results from these essential first steps can also help guide a researcher in selecting the most appropriate statistical tests for his/her study The book is intended to serve as a supplemental text in statistics or research courses offered in graduate programs in education counseling school psychology behavioral sciences and social sciences as well as undergraduate programs that contain a heavy emphasis on statistics The content and issues covered are also beneficial for faculty and researchers who are knowledgeable about research design and able to use a statistical software package but are unsure of the first steps to take with their data Increasingly faculty are forming partnerships with schools clinics and other institutions to help them analyze data in their extensive databases This book can serve as a reference for helping them get existing data files in an appropriate form to run statistical analysis This book is not a replacement for a statistics textbook It assumes that readers have some knowledge of basic statistical concepts and use of statistical software or that they will be learning these concepts and skills concurrently throughout the course SPSS was chosen to illustrate the preparation evaluation and manipulation of data However students or researchers who do not use SPSS will benefit from the content since the overall structure and pedagogical approach of the book focuses heavily on the data issues and decisions to be made Doing Social

Quantitative Methods for Second Language Research Carsten Roever, Aek Phakiti, 2017-07-20 *Quantitative Methods for Second Language Research* introduces approaches to and techniques for quantitative data analysis in second language research with a primary focus on second language learning and assessment research It takes a conceptual problem solving approach by emphasizing the understanding of statistical theory and its application to research problems while paying less attention to the mathematical side of statistical analysis The text discusses a range of common statistical analysis techniques presented and illustrated through applications of the IBM Statistical Package for Social Sciences SPSS program These include tools for descriptive analysis e g means and percentages as well as inferential analysis e g correlational analysis t tests and analysis of variance ANOVA The text provides conceptual explanations of quantitative methods through the use of examples cases and published studies in the field In addition a companion website to the book hosts slides review exercises and answer keys for each chapter as well as SPSS files Practical and lucid this book is the ideal resource for data analysis for graduate students and researchers in applied linguistics

Modern Survival Analysis in Clinical Research Ton J. Cleophas, Aeilko H. Zwinderman, 2023-05-29 An important novel menu for Survival Analysis entitled *Accelerated Failure Time AFT models* has been published by IBM international Business Machines in its SPSS statistical software update of 2023 Unlike the traditional Cox regressions that work with hazards which are the ratio of deaths and non deaths in a sample it works with risk of death which is the proportion of deaths in the same sample The latter approach may provide better sensitivity of testing but has been seldom applied because with computers risks are tricky and hazards because they are odds are fine This was underscored in 1997 by Keiding and colleague statisticians from Copenhagen University who showed better sensitive goodness of fit and null hypothesis tests with AFT than with Cox survival tests So far a controlled study of a representative sample of clinical Kaplan Meier assessments where the sensitivity of Cox regression is systematically tested against that of AFT modeling has not been accomplished This edition is the first textbook and tutorial of AFT modeling both for medical and healthcare students and for professionals Each chapter can be studied as a standalone and using real as well as hypothesized data it tests the performance of the novel methodology against traditional Cox regressions Step by step analyses of over 20 data files stored at Supplementary Files at Springer Interlink are included for

self assessment We should add that the authors are well qualified in their field Professor Zwinderman is past president of the International Society of Biostatistics 2012 2015 and Professor Cleophas is past president of the American College of Angiology 2000 2002 From their expertise they should be able to make adequate selections of modern data analysis methods for the benefit of physicians students and investigators The authors have been working and publishing together for 25 years and their research can be characterized as a continued effort to demonstrate that clinical data analysis is not mathematics but rather a discipline at the interface of biology and mathematics
