**IBM z/OS Mainframe Security and Audit Management Using the IBM Security zSecure Suite** Axel Buecker, Michael Cairns, Monique Conway, Mark S. Hahn, Deborah McLemore, Jamie Pease, Lili Xie, IBM Redbooks, 2011-08-18 Every organization has a core set of mission critical data that must be protected Security lapses and failures are not simply disruptions they can be catastrophic events and the consequences can be felt across the entire organization As a result security administrators face serious challenges in protecting the company's sensitive data IT staff are challenged to provide detailed audit and controls documentation at a time when they are already facing increasing demands on their time due to events such as mergers reorganizations and other changes Many organizations do not have enough experienced mainframe security administrators to meet these objectives and expanding employee skillsets with low level mainframe security technologies can be time consuming The IBM Security zSecure suite consists of multiple components designed to help you administer your mainframe security server monitor for threats audit usage and configurations and enforce policy compliance Administration provisioning and management components can significantly reduce administration contributing to improved productivity faster response time and reduced training time needed for new administrators This IBM Redbooks publication is a valuable resource for security officers administrators and architects who wish to better understand their mainframe security solutions

*Identity Management Design Guide with IBM Tivoli Identity Manager* Axel Buecker, Dr. Werner Filip, Jaime Cordoba Palacios, Andy Parker, IBM Redbooks, 2009-11-06 Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business It is the process that enables business initiatives by efficiently managing the user life cycle including identity resource provisioning for people users and by integrating it into the required business processes Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions This IBM Redbooks publication provides an approach for designing an identity management solution with IBM Tivoli Identity Manager Version 5.1 Starting from the high level organizational viewpoint we show how to define user registration and maintenance processes using the self registration and self care interfaces as well as the delegated administration capabilities Using the integrated workflow we automate the submission approval processes for identity

management requests and with the automated user provisioning we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure
