sophisticated packages that allow the manipulation and analysis of geographical information are used in location decisions of new businesses for public service delivery for planning decisions by local and central government Many more applications exist and some estimate the number of people across the world that are using GIS in their daily work at several millions However many applications of GIS are hard to learn and to master This is understandable as until quite recently the main focus of software vendors in the area of GIS was on the delivery of basic functionality and development of methods to present and manipulate geographical information using the available computing resources As a result little attention was paid to usability aspects of GIS This is evident in many public and private systems where the terminology conceptual design and structure are all centred around the engineering of GIS and not on the needs and concepts that are familiar to the user This book covers a range of topics from the cognitive models of geographical representation to interface design It will provide the reader with frameworks and techniques that can be used and description of case studies in which these techniques have been used for computer mapping application
