Longitudinal Data Analysis for the Behavioral Sciences Using R Jeffrey D. Long, 2012 This book is a practical guide for the analysis of longitudinal behavioural data Longitudinal data consist of repeated measures collected on the same subjects over time

Statistical Methods in Psychiatry and Related Fields Ralitza Gueorguieva, 2017-11-20 Data collected in psychiatry and related fields are complex because outcomes are rarely directly observed there are multiple correlated repeated measures within individuals there is natural heterogeneity in treatment responses and in other characteristics in the populations Simple statistical methods do not work well with such data More advanced statistical methods capture the data complexity better but are difficult to apply appropriately and correctly by investigators who do not have advanced training in statistics This book presents at a non technical level several approaches for the analysis of correlated data mixed models for continuous and categorical outcomes nonparametric methods for repeated measures and growth mixture models for heterogeneous trajectories over time Separate chapters are devoted to techniques for multiple comparison correction analysis in the presence of missing data adjustment for covariates assessment of mediator and moderator effects study design and sample size considerations The focus is on the assumptions of each method applicability and interpretation rather than on technical details Features Provides an overview of intermediate to advanced statistical methods applied to psychiatry Takes a non technical approach with mathematical details kept to a minimum Includes lots of detailed examples from published studies in psychiatry and related fields Software programs data sets and output are available on a supplementary website The intended audience are applied researchers with minimal knowledge of statistics although the book could also benefit collaborating statisticians The book together with the online materials is a valuable resource aimed at promoting the use of appropriate statistical methods for the analysis of repeated measures data Ralitza Gueorguieva is a Senior Research Scientist at the Department of Biostatistics Yale School of Public Health She has more than 20 years experience in statistical methodology development and collaborations with psychiatrists and other researchers and is the author of over 130 peer reviewed publications

Multilevel Modeling Using R W. Holmes Finch, Jocelyn E. Bolin, Ken Kelley, 2016-03-09 Multilevel Modelling using R provides a helpful guide to conducting multilevel data modeling using the R software environment After reviewing standard linear models the authors present the basics of multilevel models and explain how to fit these models using R They then show how to employ multilevel modeling with longitudinal data and demonstrate the valuable graphical options in R The book also describes models for categorical dependent variables in both single level and multilevel data The book concludes with Bayesian fitting of multilevel models Complete data sets for the book can be found on the book's website www.mlminr.com

Linear Regression Models John P. Hoffmann, 2021-09-12 Research in social and behavioral sciences has benefited from linear regression models LRMs for decades to identify and understand the associations among a set of explanatory variables and an outcome variable Linear Regression Models Applications in R provides you with a comprehensive treatment of these models and indispensable guidance about how to estimate them using the R software environment After furnishing some background material the author explains how to estimate simple and multiple LRMs in R

including how to interpret their coefficients and understand their assumptions Several chapters thoroughly describe these assumptions and explain how to determine whether they are satisfied and how to modify the regression model if they are not The book also includes chapters on specifying the correct model adjusting for measurement error understanding the effects of influential observations and using the model with multilevel data The concluding chapter presents an alternative model logistic regression designed for binary or two category outcome variables The book includes appendices that discuss data management and missing data and provides simulations in R to test model assumptions Features Furnishes a thorough introduction and detailed information about the linear regression model including how to understand and interpret its results test assumptions and adapt the model when assumptions are not satisfied Uses numerous graphs in R to illustrate the model s results assumptions and other features Does not assume a background in calculus or linear algebra rather an introductory statistics course and familiarity with elementary algebra are sufficient Provides many examples using real world datasets relevant to various academic disciplines Fully integrates the R software environment in its numerous examples The book is aimed primarily at advanced undergraduate and graduate students in social behavioral health sciences and related disciplines taking a first course in linear regression It could also be used for self study and would make an excellent reference for any researcher in these fields The R code and detailed examples provided throughout the book equip the reader with an excellent set of tools for conducting research on numerous social and behavioral phenomena John P Hoffmann is a professor of sociology at Brigham Young University where he teaches research methods and applied statistics courses and conducts research on substance use and criminal behavior

Usage-Based Approaches to Language Acquisition and Language Teaching Jacqueline Evers-Vermeul, Elena Tribushinina, 2017-03-06 Although usage based approaches have been successfully applied to the study of both first and second language acquisition to monolingual and bilingual development and to naturalistic and instructed settings it is not common to consider these different kinds of acquisition in tandem The present volume takes an integrative approach and

shows that usage based theories provide a much needed unified framework for the study of first second and foreign language acquisition in monolingual and bilingual contexts The contributions target the acquisition of a wide range of linguistic phenomena and critically assess the applicability and explanatory power of the usage based paradigm The book also systematically examines a range of cognitive and linguistic factors involved in the process of language development and relates relevant findings to language teaching Finally this volume contributes to the assessment and refinement of empirical methods currently employed in usage based acquisition research This book is of interest to scholars of language acquisition language pedagogy developmental psychology as well as Cognitive Linguistics and Construction Grammar
